## Target

**Function** Involved in the base excision repair (BER) pathway, by catalyzing the poly(ADP-ribosylation) of a limited number of acceptor proteins involved in chromatin architecture and in DNA metabolism. This modification follows DNA damages and appears as an obligatory step in a detection/signaling pathway leading to the reparation of DNA strand breaks. Mediates the poly(ADP-ribosylation) of APLF and CHFR. Positively regulates the transcription of MTUS1 and negatively regulates the transcription of MTUS2/TIP150. With EEF1A1 and TXK, forms a complex that acts as a T-helper 1 (Th1) cell-specific transcription factor and binds the promoter of IFN-gamma to directly regulate its transcription, and is thus involved importantly in Th1 cytokine production. Required for PARP9 and DTX3L recruitment to DNA damage sites. PARP1-dependent PARP9-DTX3L-mediated ubiquitination promotes the rapid and specific recruitment of 53BP1/TP53BP1, UIMC1/RAP80, and BRCA1 to DNA damage sites.

**Sequence similarities** Contains 1 BRCT domain.  
Contains 1 PARP alpha-helical domain.  
Contains 1 PARP catalytic domain.  
Contains 2 PARP-type zinc fingers.

**Post-translational modifications** Phosphorylated by PRKDC and TXK.  
Poly-ADP-ribosylated by PARP2. Poly-ADP-ribosylation mediates the recruitment of CHD1L to DNA damage sites.  
S-nitrosylated, leading to inhibit transcription regulation activity.

**Cellular localization** Nucleus. Nucleus, nucleolus. Localizes at sites of DNA damage.

Ab32064 and ab8245 (Mouse anti GAPDH loading control) were incubated overnight at 4°C at 1/10000 dilutions. Blots were developed with Goat anti-Rabbit IgG H&L (IRDye® 800CW) ab216773 and 680CW Goat anti Mouse secondary antibodies at 1/10000 dilution for 1 hour at room temperature before imaging.

**Predicted band size** : 25 kDa

**Exposure time** : 10 seconds

Jurkat cells were incubated at 37°C for 24 hours with vehicle control (0  $\mu$ M) and different concentrations of 15-Acetoxyiscirpenol ([ab142381](#)). Increased expression of cleaved PARP (ab32064) in Jurkat cells correlates with an increase in 15-Acetoxyiscirpenol concentration, as described in literature.

Whole cell lysates were prepared with RIPA buffer (containing protease inhibitors and sodium orthovanadate), 20 $\mu$ g of each were loaded on the gel and the WB was run under reducing conditions. After transfer the membrane was blocked for an hour using 5% BSA before being incubated with ab32064 at 1/10000 dilution and [ab8227](#) at 1  $\mu$ g/ml overnight at 4°C. Antibody binding was detected using an anti-rabbit antibody conjugated to HRP ([ab97051](#)) at 1/10000 and visualised using ECL development solution.
