### General Info

---

**Function** Component of the origin recognition complex (ORC) that binds origins of replication. DNA-binding is ATP-dependent, however specific DNA sequences that define origins of replication have not been identified so far. ORC is required to assemble the pre-replication complex necessary to initiate DNA replication.

**Sequence similarities** Belongs to the ORC3 family.

**Post-translational modifications** Phosphorylated upon DNA damage, probably by ATM or ATR.
