WB		Use a concentration of 1 µg/ml. Predicted molecular weight: 92 kDa. Good results were obtained when blocked with 5% non-fat dry milk in 0.05% PBS-T.

Target

Function	Component of the spliceosome A complex. Regulates alternative splicing of a number of mRNAs. May modulate splice site pairing after recruitment of the U1 and U2 snRNPs to the 5' and 3' splice sites of the intron. May both positively and negatively regulate apoptosis by regulating the alternative splicing of several genes involved in this process, including FAS and CASP2/caspase-2. In the case of FAS, promotes exclusion of exon 6 thereby producing a soluble form of FAS that inhibits apoptosis. In the case of CASP2/caspase-2, promotes exclusion of exon 9 thereby producing a catalytically active form of CASP2/Caspase-2 that induces apoptosis.
Tissue specificity	Isoform 5 is widely expressed in normal tissues and is expressed at increased levels in T-leukemic cell lines.
Sequence similarities	Belongs to the RBM5/RBM10 family. Contains 1 C2H2-type zinc finger. Contains 1 G-patch domain. Contains 1 RanBP2-type zinc finger. Contains 2 RRM (RNA recognition motif) domains.
Cellular localization	Nucleus.
