Application notes Is unsuitable for Flow Cyt, ICC/IF or IHC-P.

Target

Function Converts testosterone (T) into 5-alpha-dihydrotestosterone (DHT) and progesterone or corticosterone into their corresponding 5-alpha-3-oxosteroids. It plays a central role in sexual differentiation and androgen physiology.

Tissue specificity Expressed in high levels in the prostate and many other androgen-sensitive tissues.

Involvement in disease Defects in SRD5A2 are the cause of pseudovaginal perineoscrotal hypospadias (PPSH) [MIM:264600]. A form of male pseudohermaphroditism in which 46,XY males show ambiguous genitalia at birth, including perineal hypospadias and a blind perineal pouch, and develop masculinization at puberty. The name of the disorder stems from the finding of a blind-ending perineal opening resembling a vagina and a severely hypospadiac penis with the urethra opening onto the perineum.

Sequence similarities Belongs to the steroid 5-alpha reductase family.

Cellular localization Microsome membrane. Endoplasmic reticulum membrane.
