Relevance

Salmonella is a genus of rod-shaped, Gram-negative, non-spore forming, predominantly motile *Enterobacteriaceae* and cause many types of infections from mild gastroenteritis to life threatening typhoid fever. Salmonella can be serotyped according to somatic antigens O (group O: O2-O67 groups), surface Vi, phase I flagellar and phase II flagellar (H types: H-a- H-z81) antigens. The somatic O antigen are heat stable and upon which grouping of the organism is based. The H antigen are heat labile and usually associated with motility. H antigen exist in 2 phases, phase I and phase II.
