Target

Function

Involved in translation termination in response to the termination codons UAA, UAG and UGA. May play a role as a potent stimulator of the release factor activity of ETF1. Exhibits GTPase activity, which is ribosome- and ETF1-dependent. May play a role in cell cycle progression. Component of the transient SURF complex which recruits UPF1 to stalled ribosomes in the context of nonsense-mediated decay (NMD) of mRNAs containing premature stop codons.

Tissue specificity

Highly expressed in IUCC stage II colorectal cancer (CRC).

Sequence similarities

Belongs to the GTP-binding elongation factor family. ERF3 subfamily.

Cellular localization

Cytoplasm.
