

## Product datasheet

# Recombinant Hepatitis C Virus Core 3a protein ab123527

### Overview

---

<b>Product name</b>	Recombinant Hepatitis C Virus Core 3a protein
<b>Protein length</b>	Protein fragment

### Description

---

<b>Nature</b>	Recombinant
<b>Source</b>	Escherichia coli

### Amino Acid Sequence

<b>Accession</b>	<a href="#">Q81258</a>
<b>Molecular weight</b>	23 kDa
<b>Amino acids</b>	1 to 216

### Specifications

---

Our [Abpromise guarantee](#) covers the use of **ab123527** in the following tested applications.

The application notes include recommended starting dilutions; optimal dilutions/concentrations should be determined by the end user.

<b>Biological activity</b>	One unit of protease hydrolyzes 1 picomole of Ac-Asp-Glu-Dap(QXL™520)-Glu-Glu-Abu-COO-Ala-Ser-Cys(5-FAMsp)-NH <sub>2</sub> per minute at pH 7.5 at 25° C. ab123527 is in active form and the pre-activation by pep4A or pep4AK is not necessary.
----------------------------	---

<b>Applications</b>	Functional Studies
---------------------	--------------------

<b>Form</b>	Liquid
-------------	--------

### Additional notes

NS3 protease of hepatitis C virus (HCV), located on the N-terminal domain of HCV NS3, is responsible for the cleavage at the NS3/NS4A, NS4A/NS4B, NS4B/NS5A, and NS5A/NS5B sites of the nonstructural protein. The HCV NS3 is a chymotrypsin-like serine protease. It requires a cofactor, a 54 amino acid NS4 protein, to reach its optimal activity. The X-ray crystal structure studies show that NS3 forms a tight non-covalent complex with NS4. The NS3/4A protease is essential for viral replication and the formation of infectious viral particles.

### Preparation and Storage

---

## Stability and Storage

Shipped on dry ice. Upon delivery aliquot and store at -80°C. Avoid freeze / thaw cycles.

pH: 8.00

Constituents: 0.75% Potassium chloride, 0.003% DTT, 0.32% Tris HCl, 0.06% EDTA, 20% Glycerol

This product is an active protein and may elicit a biological response in vivo, handle with caution.

## General Info

---

### Relevance

HCV (Hepatitis C Virus) viral core protein forms the internal viral coat that encapsidates the genomic RNA and is enveloped in a host cell-derived lipid membrane. The hepatitis C virus (HCV) core protein represents the first 177 amino acids of the viral precursor polyprotein and is cotranslationally inserted into the membrane of the endoplasmic reticulum. The N terminus of the core protein is involved in transcriptional repression. HCV core protein is among the most conserved proteins in HCV and is known to induce sensitization of cytotoxic T lymphocytes (CTL). Therefore, it is a prime candidate for a component of a potential HCV vaccine.

**Please note:** All products are "FOR RESEARCH USE ONLY AND ARE NOT INTENDED FOR DIAGNOSTIC OR THERAPEUTIC USE"

## Our Abpromise to you: Quality guaranteed and expert technical support

---

- Replacement or refund for products not performing as stated on the datasheet
- Valid for 12 months from date of delivery
- Response to your inquiry within 24 hours
  
- We provide support in Chinese, English, French, German, Japanese and Spanish
- Extensive multi-media technical resources to help you
- We investigate all quality concerns to ensure our products perform to the highest standards

If the product does not perform as described on this datasheet, we will offer a refund or replacement. For full details of the Abpromise, please visit <http://www.abcam.com/abpromise> or contact our technical team.

## Terms and conditions

---

- Guarantee only valid for products bought direct from Abcam or one of our authorized distributors
