Product datasheet

Anti-alpha Tubulin antibody ab15246

★★★★★ 14 Abreviews  124 References  4 Images

Overview

Product name  Anti-alpha Tubulin antibody  
Description  Rabbit polyclonal to alpha Tubulin  
Host species  Rabbit  
Tested applications  Suitable for: ICC/IF, IHC-Fr, WB, IHC-P, IP  
Species reactivity  Reacts with: Mouse, Rat, Sheep, Human, Pig, Drosophila melanogaster, Zebrafish  
Predicted to work with: Rabbit, Chicken, Guinea pig, Cow, Xenopus laevis, Gerbil, Newt

Immunogen  Synthetic peptide corresponding to alpha Tubulin.

Positive control  IHC-P: Human lung tissue.

Properties

Form  Liquid  
Storage instructions  Shipped at 4°C. Upon delivery aliquot and store at -20°C. Avoid freeze / thaw cycles.  
Storage buffer  pH: 7.6  
Preservative: 0.1% Sodium azide  
Constituents: 0.0268% PBS, 1% BSA  
Purity  Immunogen affinity purified  
Clonality  Polyclonal  
Isotype  IgG

Applications

Our Abpromise guarantee covers the use of ab15246 in the following tested applications.

The application notes include recommended starting dilutions; optimal dilutions/concentrations should be determined by the end user.

Function

Tubulin is the major constituent of microtubules. It binds two moles of GTP, one at an exchangeable site on the beta chain and one at a non-exchangeable site on the alpha chain.

Sequence similarities

Belongs to the tubulin family.

Post-translational modifications

Some glutamate residues at the C-terminus are polyglutamylated. This modification occurs exclusively on glutamate residues and results in polyglutamate chains on the gamma-carboxyl group. Also monoglycylated but not polyglycylated due to the absence of functional TTLL10 in human. Monoglycylation is mainly limited to tubulin incorporated into axonemes (cilia and flagella) whereas glutamylation is prevalent in neuronal cells, centrioles, axonemes, and the mitotic spindle. Both modifications can coexist on the same protein on adjacent residues, and lowering glycylation levels increases polyglutamylation, and reciprocally. The precise function of such modifications is still unclear but they regulate the assembly and dynamics of axonemal microtubules.

Acetylation of alpha chains at Lys-40 stabilizes microtubules and affects affinity and processivity of microtubule motors. This modification has a role in multiple cellular functions, ranging from cell motility, cell cycle progression or cell differentiation to intracellular trafficking and signaling.

Cellular localization

Cytoplasm > cytoskeleton.

**Our Abpromise to you: Quality guaranteed and expert technical support**

- Replacement or refund for products not performing as stated on the datasheet
- Valid for 12 months from date of delivery
- Response to your inquiry within 24 hours
- We provide support in Chinese, English, French, German, Japanese and Spanish
- Extensive multi-media technical resources to help you
- We investigate all quality concerns to ensure our products perform to the highest standards

If the product does not perform as described on this datasheet, we will offer a refund or replacement. For full details of the Abpromise, please visit [http://www.abcam.com/abpromise](http://www.abcam.com/abpromise) or contact our technical team.

---

**Terms and conditions**

- Guarantee only valid for products bought direct from Abcam or one of our authorized distributors
