The Mouse Prostasin Enzyme-Linked Immunosorbent Assay (ELISA) kit (ab213884) is designed for the quantitative measurement of Mouse Prostasin in cell culture supernatants, serum, plasma (heparin, EDTA) and urine.

The ELISA kit is based on standard sandwich enzyme-linked immunosorbent assay technology. A

Notes | Prostasin is a protein that in humans is encoded by the PRSS8 gene. It is a single-copy gene and |
| :--- |
| mapped to 16 p11.2. Prostasin is likely to be the more physiologically relevant protease. This |
| gene encodes a trypsinogen, which is a member of the trypsin family of serine proteases. |
| Coexpression of Prostasin with either Xenopus or rat ENaC in Xenopus oocytes resulted in a |
| $60 \%$ to $80 \%$ increase in amiloride-sensitive sodium currents, and that the addition of aprotinin, a |
| serine protease inhibitor, completely prevented this activation. This enzyme is highly expressed in |
| prostate epithelia and is one of several proteolytic enzymes found in seminal fluid. The proprotein |
| is cleaved to produce a light chain and a heavy chain which are associated by a disulfide bond. It |
| is active on peptide linkages involving the carboxyl group of lysine or arginine. |

## Function

Tissue specificity

Possesses a trypsin-like cleavage specificity.
Found in prostate, liver, salivary gland, kidney, lung, pancreas, colon, bronchus and renal proximal tubular cells. In the prostate gland it may be synthesized in epithelial cells, secreted into the ducts,

| and excreted into the seminal fluid. |  |
| :--- | :--- |
| Sequence similarities | Belongs to the peptidase S1 family. <br> Contains 1 peptidase S1 domain. |
| Cellular localization | Cell membrane and Secreted > extracellular space. Found in the seminal fluid. Secreted after <br> cleavage of its C-terminus. |
