Target

Function

May play a role in junctional plaques.

Tissue specificity

Detected in heart right ventricle (at protein level). Widely expressed. Found at desmosomal plaques in simple and stratified epithelia and in non-epithelial tissues such as myocardium and lymph node follicles. In most stratified epithelia found in the desmosomes of the basal cell layer and seems to be absent from suprabasal strata.

Involvement in disease

Familial arrhythmogenic right ventricular dysplasia 9

Sequence similarities

Belongs to the beta-catenin family.
Contains 8 ARM repeats.

Cellular localization

Nucleus. Cell junction > desmosome. Nuclear and associated with desmosomes.
