General Info

Relevance

HSP65 is a member of the HSP60 family of heat shock proteins isolated from Mycobacterium bovis BCG. HSP65 from M. bovis is identical to that of M. tuberculosis, and similar to that of M. leprae, two highly pathogenic strains of mycobacterium. HSP65 is the immunodominant antigen during mycobacterial infection and vaccination, and has been linked to the development of autoimmune adjuvant arthritis in rats.
