Target

Function	Could play pivotal roles in cell cycle and DNA regulation (PubMed:19150984). Involved in innate immune defense against viruse by positively regulating the viral dsRNA receptors DDX58 and IFIH1 signaling pathways (PubMed:22328336). Involves in NOD2- and NOD1-mediated responses to bacteria suggesting a role in innate antibacterial immune pathways too (PubMed:23711367). Target of enterovirus 71 which is the major etiological agent of HFMD (hand, foot and mouth disease) (PubMed:17276651). Could play a central role for the formation and/or maintenance of the blood vessels of the circulation system.
Tissue specificity	Ubiquitously expressed.
Sequence similarities	Contains 25 ANK repeats. Contains 1 KH domain.
Post-translational modifications	Phosphorylated by CDK2.
Cellular localization	Cytoplasm. Nucleus. Detected around the nucleolus. Localized on chromatin in a cell cycle-dependent manner.
