## Target

---

<b>Function</b>	Implicated in neuroendocrine secretory processes. May be involved in processes specific for neurosecretory granules, such as their biogenesis, trafficking or regulated exocytosis or may have a general role in neuroendocrine functions. Seems to lack intrinsic enzyme activity. May play a role in the regulation of secretory granules via its interaction with SNTB2.
<b>Tissue specificity</b>	Expression is restricted to neuroendocrine cells. Found in pancreas, brain and pituitary.
<b>Sequence similarities</b>	Belongs to the protein-tyrosine phosphatase family. Receptor class 8 subfamily. Contains 1 tyrosine-protein phosphatase domain.
<b>Post-translational modifications</b>	Appears to undergo multiple proteolytic cleavage at consecutive basic residues.
<b>Cellular localization</b>	Membrane. Neuroendocrine secretory granules.
