Product datasheet

Anti-alpha Tubulin antibody [DM1A] - Loading Control
ab7291

Overview

Product name: Anti-alpha Tubulin antibody [DM1A] - Loading Control

Description: Mouse monoclonal [DM1A] to alpha Tubulin - Loading Control

Host species: Mouse

Specificity: Excellent as a protein loading control antibody. DM1A causes the 10 nm filaments to collapse into large lateral aggregates collecting in the cell periphery or tight juxtanuclear caps. It does not block microtubule assembly. It does not inhibit polymerisation or depolymerisation of platelet tubulin in vitro. It blocks (by 70-80%) the ability of tubulin dimers (with GppNHz bound) to promote a stable inhibition of adenyly cyclase. See references for further information on the above.

Tested applications: Suitable for: Flow Cyt, ICC/IF, IP, IHC-Fr, IHC-P, Electron Microscopy, WB

Species reactivity: Reacts with: Mouse, Rat, Chicken, Guinea pig, Hamster, Cow, Dog, Human, Pig, Xenopus laevis, Gerbil, African green monkey

Immunogen: Full length native protein (purified) corresponding to Chicken alpha Tubulin.

Epitope: aa 426-450

Positive control: WB: HeLa, HEK293, HepG2, Caco2, NIH3T3, PC12. Flow Cytometry: methanol fixed/Tween permeabilised HeLa cells. ICC/IF: Caco-2, NIH3T3, SV40LT-SMC. IHC-P: Human colon, Rat colon.

General notes: This antibody clone [DM1A] is manufactured by Abcam.

If you require this antibody in a particular buffer formulation or a particular conjugate for your experiments, please contact orders@abcam.com or you can find further information here.

Properties

Form: Liquid

Storage instructions: Shipped at 4°C. Store at +4°C short term (1-2 weeks). Upon delivery aliquot. Store at -20°C or -80°C. Avoid freeze / thaw cycle.

Storage buffer: pH: 7.40
Preservative: 0.02% Sodium azide
Constituents: PBS, 6.97% L-Arginine

Purity: IgG fraction
**Primary antibody notes**
Excellent as a protein loading control antibody.

**Clonality**
Monoclonal

**Clone number**
DM1A

**Isotype**
IgG1

**Light chain type**
kappa

---

**Applications**

Our Abpromise guarantee covers the use of ab7291 in the following tested applications.

The application notes include recommended starting dilutions; optimal dilutions/concentrations should be determined by the end user.

<td>1/5000 - 1/10000. Detects a band of approximately 50 kDa (predicted molecular weight: 50 kDa). We recommend diluting ab7291 to 1:10000 and incubating overnight at 4°C. Works under both reducing and non-reducing conditions. We recommend using 3% BSA as the blocking agent, blocking with milk may cause a reduction in signal intensity.</td>

**Target**

**Function**
Tubulin is the major constituent of microtubules. It binds two moles of GTP, one at an exchangeable site on the beta chain and one at a non-exchangeable site on the alpha chain.

**Sequence similarities**
Belongs to the tubulin family.

**Post-translational modifications**
Some glutamate residues at the C-terminus are polyglutamylated. This modification occurs exclusively on glutamate residues and results in polyglutamate chains on the gamma-carboxyl group. Also monoglycylated but not polyglycylated due to the absence of functional TTLL10 in human. Monoglycylation is mainly limited to tubulin incorporated into axonemes (cilia and flagella) whereas glutamylation is prevalent in neuronal cells, centrioles, axonemes, and the mitotic spindle. Both modifications can coexist on the same protein on adjacent residues, and lowering glycation levels increases polyglutamylation, and reciprocally. The precise function of such modifications is still unclear but they regulate the assembly and dynamics of axonemal microtubules.

Acetylation of alpha chains at Lys-40 stabilizes microtubules and affects affinity and processivity.
of microtubule motors. This modification has a role in multiple cellular functions, ranging from cell motility, cell cycle progression or cell differentiation to intracellular trafficking and signalling.

**Cellular localization**

Cytoplasm > cytoskeleton.

**Images**

**All lanes** : Anti-alpha Tubulin antibody [DM1A] - Loading Control (ab7291) at 1/1000 dilution

Lane 1 : HeLa 20ug
Lane 2 : PC12 20ug
Lane 3 : SV40LT-SMC 20ug
Lane 4 : NIH 3T3 20ug
Lane 5 : Rat liver 20ug
Lane 6 : Rat heart 20ug

**Secondary**

**All lanes** : Goat anti-Mouse IgG H&L (IRDye® 800CW) preadsorbed (ab216772) at 1/20000 dilution

Performed under reducing conditions.

**Predicted band size**: 50 kDa

Merged signal (red and green). Green - ab7291 observed at 52 kDa. Red - loading control, ab181602, observed at 38 kDa.

All samples were subjected to SDS-PAGE. The membrane was blocked with 3% NF Milk. Ab7291 and ab181602 (Rabbit anti GAPDH loading control) were incubated overnight at 4°C at 1/1,000 and 1/20,000 dilution respectively. Blots were developed with Goat anti-Mouse IgG H&L (IRDye® 800CW) preabsorbed ab216772 and Goat anti-Rabbit IgG H&L (IRDye® 680RD) preabsorbed ab216777 secondary antibodies at 1/20000 dilution for 1 hour at room temperature before imaging.
Ab7291 staining alpha tubulin in human breast cancer cell line by ICC/IF (Immunocytochemistry/Immunofluorescence). Cells were fixed 4% paraformaldehyde in PBS, permeabilized with 0.1% Triton X-100 in PBS and blocked with 2% bovine serum albumin in sodium phosphate buffer. Cells were co-stained with anti-pericentrin using ab4448 at 1:500 dilution and ab7291 at 1:500 dilution. Alexa Fluor® 633 goat anti mouse and Alexa Fluor® 488 goat anti-rabbit (1:500 dilution) was used as secondary antibodies. DAPI was used as a nuclei counterstain. Representative images of mitotic cells with bipolar or multipolar spindles.

ab7291 staining alpha Tubulin in SV40LT-SMC cells. The cells were fixed with 4% formaldehyde (10 min), permeabilized in 0.1% Triton X-100 for 5 minutes and then blocked in 1% BSA/10% normal goat serum/0.3M glycine in 0.1% PBS-Tween for 1h. The cells were then incubated with ab7291 at a working concentration of 0.5μg/ml and ab190573, Rabbit monoclonal [EP1332Y] to alpha Tubulin (Alexa Fluor® 647, shown in red) at 1/250 overnight at +4°C, followed by a further incubation at room temperature for 1h with an anti-mouse AlexaFluor® 488 (ab150117) at 2 μg/ml (shown in green). Nuclear DNA was labelled in blue with DAPI. This product also gave a positive signal in 100% methanol (5 min) fixed SV40 cells under the same testing conditions. Image was taken with a confocal microscope (Leica-Microsystems, TCS SP8).
IHC image of ab7291 staining alpha Tubulin in human colon formalin fixed paraffin embedded tissue sections*, performed on a Leica Bond. The section was pre-treated using heat mediated antigen retrieval with sodium citrate buffer (pH6, epitope retrieval solution 1) for 20 mins. The section was then incubated with ab7291, 5µg/ml working concentration, for 15 mins at room temperature and detected using an HRP conjugated compact polymer system. DAB was used as the chromogen. The section was then counterstained with haematoxylin and mounted with DPX. No primary antibody was used in the secondary only control (shown on the inset).

For other IHC staining systems (automated and non-automated) customers should optimize variable parameters such as antigen retrieval conditions, primary antibody concentration and antibody incubation times.

*Tissue obtained from the Human Research Tissue Bank, supported by the NIHR Cambridge Biomedical Research Centre

Overlay histogram showing HeLa cells stained with ab7291 (red line). The cells were fixed with 80% methanol (5 min) and then permeabilized with 0.1% PBS-Tween for 20 min. The cells were then incubated in 1x PBS / 10% normal goat serum / 0.3M glyoxal to block non-specific protein-protein interactions followed by the antibody (ab7291, 1µg/1x10^6 cells) for 30 min at 22°C. The secondary antibody used was an anti-mouse DyLight® 488 (ab96879) at 1/500 dilution for 30 min at 22°C. Isotype control antibody (black line) was mouse IgG1 [ICIGG1] (ab91353, 2µg/1x10^6 cells) used under the same conditions. Acquisition of >5,000 events was performed.
Immunocytochemistry/ Immunofluorescence - Anti-
alpha Tubulin antibody [DM1A] - Loading Control
(ab7291)

ab7291 staining alpha-Tubulin in Caco-2 cells. The cells were fixed with 100% methanol (5min) and then blocked in 1% BSA/10%
normal goat serum/0.3M glycine in 0.1%PBS-Tween for 1h. The
cells were then incubated with ab7291 at 1µg/ml and ab6046 at
1µg/ml overnight at +4°C, followed by a further incubation at room
temperature for 1h with an anti-mouse AlexaFluor® 488
(ab150117) at 2 µg/ml (shown in green) and anti-rabbit AlexaFluor®
594 (ab150088) at 2 µg/ml (shown in pseudo color red). Nuclear
DNA was labelled in blue with DAPI.

Negative controls: 1– Rabbit primary antibody and anti-mouse
secondary antibody; 2 – Mouse primary antibody and anti-rabbit
secondary antibody. Controls 1 and 2 indicate that there is no
unspecific reaction between primary and secondary antibodies
used.

ab7291 staining alpha-Tubulin in NIH3T3 cells. The cells were fixed
with 100% methanol (5min) and then blocked in 1% BSA/10%
normal goat serum/0.3M glycine in 0.1%PBS-Tween for 1h. The
cells were then incubated with ab7291 at 1µl/ml and ab6046 at
1µg/ml overnight at +4°C, followed by a further incubation at room
temperature for 1h with an anti-mouse AlexaFluor® 488
(ab150117) at 2 µg/ml (shown in green) and anti-rabbit AlexaFluor®
594 (ab150088) at 2 µg/ml (shown in pseudo color red). Nuclear
DNA was labelled in blue with DAPI.

Negative controls: 1– Rabbit primary antibody and anti-mouse
secondary antibody; 2 – Mouse primary antibody and anti-rabbit
secondary antibody. Controls 1 and 2 indicate that there is no
unspecific reaction between primary and secondary antibodies
used.
Lanes 2-7: Anti-alpha Tubulin antibody [DM1A] - Loading Control (ab7291) at 1/2500 dilution

Lane 1: Marker
Lanes 2-3: Daudi (Human Burkitt's lymphoma cell line) at 10 µg
Lanes 4-5: Daudi (Human Burkitt's lymphoma cell line) at 15 µg
Lanes 6-7: Daudi (Human Burkitt's lymphoma cell line) at 20 µg

Secondary
Lanes 2-7: HRP conjugated monoclonal Goat Anti-Mouse IgG at 1/1000 dilution

Performed under reducing conditions.

Predicted band size: 50 kDa
Observed band size: 50 kDa

Exposure time: 1 minute

All lanes: Anti-alpha Tubulin antibody [DM1A] - Loading Control (ab7291) at 1 µg/ml

Lane 1: HeLa (Human epithelial cell line from cervix adenocarcinoma cell line) Whole Cell Lysate
Lane 2: NIH 3T3 (Mouse embryonic fibroblast cell line) Whole Cell Lysate
Lane 3: PC12 (Rat adrenal gland pheochromocytoma cell line) Whole Cell Lysate

Lysates/proteins at 10 µg per lane.

Secondary
All lanes: Goat Anti-Mouse IgG H&L (HRP) preadsorbed (ab97040) at 1/50000 dilution

Developed using the ECL technique.

Performed under reducing conditions.
**Predicted band size:** 50 kDa  
**Observed band size:** 50 kDa  

**Exposure time:** 150 seconds

This blot was produced using a 4-12% Bis-tris gel under the MOPS buffer system. The gel was run at 200V for 50 minutes before being transferred onto a Nitrocellulose membrane at 30V for 70 minutes. The membrane was then blocked for an hour using 2% Bovine Serum Albumin before being incubated with ab7291 overnight at 4°C. Antibody binding was detected using an anti-mouse HRP (ab97040), and visualised using ECL development solution ab133406

FABP4 (green) was detected using FABP4 primary antibody (ab92501; diluted 1/1000). Alpha tubulin (red) was detected using the mouse monoclonal (ab7291) antibody. Cells were imaged by confocal microscopy, using z-stack for adipocyte-like cells.

IHC image of ab7291 staining alpha Tubulin in rat colon formalin fixed paraffin embedded tissue sections, performed on a Leica Bond. The section was pre-treated using heat mediated antigen retrieval with sodium citrate buffer (pH6, epitope retrieval solution 1) for 20 mins. The section was then incubated with ab7291, 0.5μg/ml working concentration, for 15 mins at room temperature and detected using an HRP conjugated compact polymer system. DAB was used as the chromogen. The section was then counterstained with haematoxylin and mounted with DPX. No primary antibody was used in the secondary only control (shown on the inset). For other IHC staining systems (automated and non-automated) customers should optimize variable parameters such as antigen retrieval conditions, primary antibody concentration and antibody incubation times.
Immunocytochemistry/ Immunofluorescence - Anti-alpha Tubulin antibody [DM1A] - Loading Control (ab7291)

ICC/IF image of ab7291 stained human HeLa cells. The cells were methanol fixed (5 min) and incubated with the antibody (ab7291, 1µg/ml) for 1h at room temperature. The secondary antibody (green) was Alexa Fluor® 488 goat anti-mouse IgG (H+L) used at a 1/1000 dilution for 1h. Image-iT™FX Signal Enhancer was used as the primary blocking agent, 5% BSA (in TBS-T) was used for all other blocking steps. DAPI was used to stain the cell nuclei (blue). Alexa Fluor® 594 WGA was used to label plasma membranes (red).

Immunofluorescent imaging of human cells (U2OS) with ab7291 reveals a delicate network of alpha-tubulin (green) located exclusively in the cytoplasm. The nucleus is stained blue.

IF was performed with a standard paraformaldehyde technique (fixed in PBS buffered PFH 4% for 5 minutes, permeabilised with 0.5% triton-PBS for 5 minutes, blocked with 5% milk / 0.2% tween for one hour. Primary antibody used at 1/200 in 5% milk / 0.2% TWEEN for one hour, secondary antibody Alexa 488 for 30 minutes. All blocking and incubation steps carried out at 37 degrees.

Unfortunately, due to size constraints for images on our website, we are unable to show the full uncompressed picture in all its glory!

Please note: All products are "FOR RESEARCH USE ONLY. NOT FOR USE IN DIAGNOSTIC PROCEDURES"

Our Abpromise to you: Quality guaranteed and expert technical support

- Replacement or refund for products not performing as stated on the datasheet
- Valid for 12 months from date of delivery
- Response to your inquiry within 24 hours
- We provide support in Chinese, English, French, German, Japanese and Spanish
- Extensive multi-media technical resources to help you
- We investigate all quality concerns to ensure our products perform to the highest standards

If the product does not perform as described on this datasheet, we will offer a refund or replacement. For full details of the Abpromise, please visit https://www.abcam.com/abpromise or contact our technical team.
Terms and conditions

- Guarantee only valid for products bought direct from Abcam or one of our authorized distributors
