Product datasheet

Anti-Annexin V/ANXA5 antibody ab14196

Overview

Product name: Anti-Annexin V/ANXA5 antibody
Description: Rabbit polyclonal to Annexin V/ANXA5
Host species: Rabbit
Tested applications: Suitable for: Flow Cyt, WB, IHC-FoFr, IHC-Fr, IHC-P, ICC/IF
Species reactivity: Reacts with: Mouse, Rat, Human
Immunogen: Recombinant full length protein corresponding to Human Annexin V/ANXA5.
Database link: P08758
(Peptide available as ab52111)
Positive control: This antibody gave a positive result in IHC in the following FFPE tissue: Human skin melanoma.
General notes: This product was previously labelled as Annexin V

Properties

Form: Liquid
Storage instructions: Shipped at 4°C. Upon delivery aliquot and store at -20°C. Avoid freeze / thaw cycles.
Storage buffer: Preservative: 0.02% Sodium Azide
Constituents: 50% Glycerol, 1% BSA, PBS, pH 7.2
Purity: Immunogen affinity purified
Clonality: Polyclonal
Isotype: IgG

Applications

Our Abpromise guarantee covers the use of ab14196 in the following tested applications.
The application notes include recommended starting dilutions; optimal dilutions/concentrations should be determined by the end user.

1
Function
This protein is an anticoagulant protein that acts as an indirect inhibitor of the thromboplastin-specific complex, which is involved in the blood coagulation cascade.

Involvement in disease
Pregnancy loss, recurrent, 3

Sequence similarities
Belongs to the annexin family.
Contains 4 annexin repeats.

Domain
The [IL]-x-C-x-x-[DE] motif is a proposed target motif for cysteine S-nitrosylation mediated by the iNOS-S100A8/A9 transnitrosylase complex.
A pair of annexin repeats may form one binding site for calcium and phospholipid.

Post-translational modifications
S-nitrosylation is induced by interferon-gamma and oxidatively-modified low-density lipoprotein (LDL(ox)) possibly implicating the iNOS-S100A8/9 transnitrosylase complex.

Application | Abreviews | Notes
--- | --- | ---
Flow Cyt |  | Use at an assay dependent concentration.
ab171870 - Rabbit polyclonal IgG, is suitable for use as an isotype control with this antibody.

WB |  | Use a concentration of 1 - 4 µg/ml. Can be blocked with Annexin V/ANXA5 peptide (ab52111).

IHC-FoFr |  | Use at an assay dependent concentration.

IHC-Fr |  | Use at an assay dependent concentration.

IHC-P |  | Use a concentration of 1 µg/ml.

ICC/IF |  | Use at an assay dependent concentration. PubMed: 20086251

ab14196 staining Annexin V/ANXA5 in mouse embryonic 15 day brain tissue sections by Immunohistochemistry (PFA perfusion fixed frozen sections). Tissue samples were fixed by perfusion with paraformaldehyde, permeabilized with 0.5% Triton X-100 in PBS, blocked with 10% serum for 1 hour at 25°C and antigen retrieval was by heat mediation in citrate buffer, pH 6. The sample was incubated with primary antibody (1/200) for 16 hours at 4°C. An Alexa Fluor® 594-conjugated donkey anti-rabbit polyclonal (1/700) was used as the secondary antibody.

ab14196 staining cells from a mouse organ of Corti (whole mount) by ICC/IF. The tissue was PFA fixed and permeabilized in 0.5% Triton X-100 prior to blocking in 5% goat serum, 2% BSA for 1 hour at 25°C. The primary antibody was diluted 1/200 and incubated with the sample for 2 hours at 25°C. A Cy3® conjugated sheep anti-rabbit IgG antibody, diluted 1/200 was used as the secondary. Alexa Fluor 488® - Phalloidin was used to label the actin cytoskeleton and DAPI was used to label nuclei.
ab14196 staining cells from a human pancreatic cell line by ICC/IF. Cells were PFA fixed and permeabilized in 0.1% Triton X-100 prior to blocking in 1% BSA for 30 minutes at 22°C. The primary antibody was diluted 1/100 and incubated with the sample for 1 hour at 22°C. An Alexa Fluor® 488 conjugated donkey anti-rabbit antibody, diluted 1/1000, was used as the secondary.

IHC image of Annexin V/ANXA5 staining in Human skin melanoma formalin fixed paraffin embedded tissue section, performed on a Leica Bond™ system using the standard protocol F. The section was pre-treated using heat mediated antigen retrieval with sodium citrate buffer (pH6, epitope retrieval solution 1) for 20 mins. The section was then incubated with ab14196, 1µg/ml, for 15 mins at room temperature and detected using an HRP conjugated compact polymer system. DAB was used as the chromogen. The section was then counterstained with haematoxylin and mounted with DPX.

For other IHC staining systems (automated and non-automated) customers should optimize variable parameters such as antigen retrieval conditions, primary antibody concentration and antibody incubation times.

Please note: All products are “FOR RESEARCH USE ONLY. NOT FOR USE IN DIAGNOSTIC PROCEDURES”

Our Abpromise to you: Quality guaranteed and expert technical support

- Replacement or refund for products not performing as stated on the datasheet
- Valid for 12 months from date of delivery
- Response to your inquiry within 24 hours
- We provide support in Chinese, English, French, German, Japanese and Spanish
- Extensive multi-media technical resources to help you
- We investigate all quality concerns to ensure our products perform to the highest standards

If the product does not perform as described on this datasheet, we will offer a refund or replacement. For full details of the Abpromise, please visit https://www.abcam.com/abpromise or contact our technical team.
Terms and conditions

- Guarantee only valid for products bought direct from Abcam or one of our authorized distributors
