Product datasheet

Anti-B4GALT1 antibody ab121326

⭐⭐⭐⭐⭐ 2 Abreviews  1 References  3 Images

Overview

Product name       Anti-B4GALT1 antibody
Description        Rabbit polyclonal to B4GALT1
Host species       Rabbit
Tested applications Suitable for: WB, ICC/IF, IHC-P
Species reactivity Reacts with: Human
Immunogen          antigen, corresponding to amino acids 50-163 of Human B4GALT1 (P15291).
Positive control   Human prostate tissue; U-251 MG cell lysate; A-431 cells.

Properties

Form               Liquid
Storage instructions Shipped at 4°C. Upon delivery aliquot and store at -20°C. Avoid repeated freeze / thaw cycles.
Storage buffer     pH: 7.20
                  Preservative: 0.02% Sodium azide
                  Constituents: 59% PBS, 40% Glycerol
Purity             Immunogen affinity purified
Clonality          Polyclonal
Isotype            IgG

Applications

Our Abpromise guarantee covers the use of ab121326 in the following tested applications.

The application notes include recommended starting dilutions; optimal dilutions/concentrations should be determined by the end user.

### Target

| **Function** | The Golgi complex form catalyzes the production of lactose in the lactating mammary gland and could also be responsible for the synthesis of complex-type N-linked oligosaccharides in many glycoproteins as well as the carbohydrate moieties of glycolipids. The cell surface form functions as a recognition molecule during a variety of cell to cell and cell to matrix interactions, as those occurring during development and egg fertilization, by binding to specific oligosaccharide ligands on opposing cells or in the extracellular matrix. |
| **Tissue specificity** | Ubiquitously expressed, but at very low levels in fetal and adult brain. |
| **Pathway** | Protein modification; protein glycosylation. |
| **Involvement in disease** | Defects in B4GALT1 are the cause of congenital disorder of glycosylation type 2D (CDG2D) [MIM:607091]. CDGs are a family of severe inherited diseases caused by a defect in protein N-glycosylation. They are characterized by under-glycosylated serum proteins. These multisystem disorders present with a wide variety of clinical features, such as disorders of the nervous system development, psychomotor retardation, dysmorphic features, hypotonia, coagulation disorders, and immunodeficiency. The broad spectrum of features reflects the critical role of N-glycoproteins during embryonic development, differentiation, and maintenance of cell functions. |
| **Sequence similarities** | Belongs to the glycosyltransferase 7 family. |
| **Post-translational modifications** | The soluble form derives from the membrane forms by proteolytic processing. |

### Images

**All lanes** : Anti-B4GALT1 antibody (ab121326) at 1/250 dilution

**Lane 1** : RT-4 cell lysate  
**Lane 2** : U-251 MG cell lysate  
**Lane 3** : Human Plasma  
**Lane 4** : Human Liver lysate  
**Lane 5** : Human Tonsil lysate

Developed using the ECL technique.
ab121326, at 1/125, staining B4GALT1 in paraffin embedded Human prostate tissue by Immunohistochemistry.

ab121326, at 4 µg/ml, staining B4GALT1 (green) in A-431 cells by Immunofluorescence.

Our Abpromise to you: Quality guaranteed and expert technical support

- Replacement or refund for products not performing as stated on the datasheet
- Valid for 12 months from date of delivery
- Response to your inquiry within 24 hours
- We provide support in Chinese, English, French, German, Japanese and Spanish
- Extensive multi-media technical resources to help you
- We investigate all quality concerns to ensure our products perform to the highest standards

If the product does not perform as described on this datasheet, we will offer a refund or replacement. For full details of the Abpromise, please visit https://www.abcam.com/abpromise or contact our technical team.

Terms and conditions

- Guarantee only valid for products bought direct from Abcam or one of our authorized distributors
