Product datasheet

Anti-beta Actin antibody ab8227

Overview

Product name: Anti-beta Actin antibody
Description: Rabbit polyclonal to beta Actin
Host species: Rabbit
Specificity: The immunogen used for this product shares 77% homology with Gamma actin/actin cytoplasmic 2. Cross-reactivity with this protein has not been confirmed experimentally.

Tested applications: Suitable for: IHC-Fr, IP, WB, ICC, Flow Cyt, IHC-FrFI, IHC-P, ICC/IF, ELISA

Species reactivity: Reacts with: Mouse, Rat, Sheep, Rabbit, Chicken, Guinea pig, Cow, Dog, Human, Pig, Xenopus laevis, Drosophila melanogaster, Fish, Monkey, Zebrafish, Rhesus monkey, Chinese hamster

Immunogen: Synthetic peptide (the amino acid sequence is considered to be commercially sensitive) within Human beta Actin aa 1-100. The exact sequence is proprietary. (Peptide available as ab28691, ab13772)

Positive control: WB: Mouse brain tissue lysate and HeLa, A431, HEK-293, NIH/3T3, PC-12, Jurkat, MDCK, EBtr, SL-29 and CHO cell lysates; Rat liver tissue lysate; Fish and rabbit liver lysates. IHC-P: Normal human colon and normal human liver tissues; Rat small intestine tissue. ICC/IF: NIH/3T3 and SV40LT-SMC cells.

General notes: For western blot, milk blocking is suitable for use with fluorescent detection systems. For western blot using chemiluminescent (ECL) systems we recommend BSA blocking.
Abcam recommended secondaries - Goat Anti-Rabbit HRP (ab205718) and Goat Anti-Rabbit Alexa Fluor® 488 (ab150077).
See other anti-rabbit secondary antibodies that can be used with this antibody.

Properties

Form: Liquid
Storage instructions: Shipped at 4°C. Store at +4°C short term (1-2 weeks). Upon delivery aliquot. Store at -20°C or -80°C. Avoid freeze / thaw cycle.
Storage buffer: pH: 7.40
Preservative: 0.02% Sodium azide
Constituent: PBS
Batches of this product that have a concentration < 1mg/ml may have BSA added as a stabilising agent. If you would like information about the formulation of a specific lot, please contact our scientific support team who will be happy to help.

### Purity

Immunogen affinity purified

### Clonality

Polyclonal

### Isotype

IgG

### Applications

Our Abpromise guarantee covers the use of ab8227 in the following tested applications.

The application notes include recommended starting dilutions; optimal dilutions/concentrations should be determined by the end user.

| WB          | 1/1000 - 1/5000. Use at an assay dependent concentration.  
Use at an assay dependent concentration.  
W recommend Goat Anti-Rabbit IgG H&L (HRP) (ab6721) secondary antibody. A stronger signal is observed in chemiluminescent western blot when using 2% BSA as the blocking agent. Milk blocking is suitable for use with fluorescent detection systems. |
| ICC         |           | Use at an assay dependent concentration. |
| Flow Cyt    |           | Use at an assay dependent concentration.  
ab171870 - Rabbit polyclonal IgG, is suitable for use as an isotype control with this antibody. |
| IHC-FrFI    |           | Use at an assay dependent concentration. |
| IHC-P       | Use a concentration of 1 µg/ml. Perform heat mediated antigen retrieval before commencing with IHC staining protocol. |
| IHC-P       | Use a concentration of 0.2 µg/ml.  
We recommend Goat Anti-Rabbit IgG H&L (Biotin) (ab6720) secondary antibody or  
Goat Anti-Rabbit IgG Fc (HRP) (ab97200) secondary antibody. |
| ICC/IF      | Use a concentration of 1 µg/ml. |
| ELISA       | 1/1000. |

### Target

#### Function

Actins are highly conserved proteins that are involved in various types of cell motility and are ubiquitously expressed in all eukaryotic cells.

#### Involvement in disease

Defects in ACTB are a cause of dystonia juvenile-onset (DYTJ) [MIM:607371]. DYTJ is a form of dystonia with juvenile onset. Dystonia is defined by the presence of sustained involuntary muscle contraction, often leading to abnormal postures. DYTJ patients manifest progressive, generalized, dopa-unresponsive dystonia, developmental malformations and sensory hearing loss.
Sequence similarities
Belongs to the actin family.

Post-translational modifications
ISGylated.

Cellular localization
Cytoplasm > cytoskeleton. Localized in cytoplasmic mRNP granules containing untranslated mRNAs.

Images

All lanes: Anti-beta Actin antibody (ab8227) at 1/1000 dilution

Lane 1: A431 (human epidermoid carcinoma cell line) Whole Cell Lysate
Lane 2: HEK-293 (human epithelial cell line from embryonic kidney) Whole Cell Lysate
Lane 3: NIH/3T3 (mouse embryo fibroblast cell line) Whole Cell Lysate
Lane 4: PC-12 (rat adrenal gland pheochromocytoma cell line) Whole Cell Lysate

Lysates/proteins at 20 µg per lane.

Secondary
All lanes: Goat Anti-Rabbit IgG H&L (Alexa Fluor® 790) (ab175781) at 1/10000 dilution

Observed band size: 42 kDa

why is the actual band size different from the predicted?

This blot was produced using a 4-12% Bis-tris gel under the MOPS buffer system. The gel was run at 200V for 50 minutes before being transferred onto a nitrocellulose membrane at 30V for 70 minutes. The membrane was then blocked for an hour using 5% Milk before being incubated with ab8227 overnight at 4°C. Antibody binding was detected using Goat Anti-Rabbit IgG H&L (Alexa Fluor® 790) (ab175781) secondary antibody at a 1:10,000 dilution for 1hr at room temperature and then imaged using the Licor Odyssey CLx.
ab8227 staining beta Actin in SV40LT-SMC cells. The cells were fixed with 4% formaldehyde (10min), permeabilized with 0.1% Triton X-100 for 5 minutes and then blocked with 1% BSA/10% normal goat serum/0.3M glycine in 0.1%PBS-Tween for 1h. The cells were then incubated overnight at +4°C with ab8227 at 1μg/ml (detected with ab150081, Alexa Fluor® 488 Goat anti-Rabbit, 1μg/ml, shown in green); and ab195889, Mouse monoclonal [DM1A] to alpha Tubulin - Microtubule Marker (Alexa Fluor® 594), at 1/250 dilution (shown in red). Nuclear DNA was labelled with DAPI (shown in blue).

Image was taken with a confocal microscope (Leica-Microsystems, TCS SP8).

IHC image of ab8227 staining beta Actin in rat small intestine formalin fixed paraffin embedded tissue sections, performed on a Leica Bond. The section was pre-treated using heat mediated antigen retrieval with EDTA (epitope retrieval solution 2) for 20 mins. The section was then incubated with ab8227, 0.2μg/ml, for 15 mins at room temperature and detected using an HRP conjugated compact polymer system. DAB was used as the chromogen. The section was then counterstained with haematoxylin and mounted with DPX. No primary antibody was used in the secondary only control (shown on the inset).

For other IHC staining systems (automated and non-automated) customers should optimize variable parameters such as antigen retrieval conditions, primary antibody concentration and antibody incubation times.
ab8227 staining beta Actin in NIH/3T3 (mouse embryo fibroblast cell line) cells. The cells were fixed with 100% methanol (5min), permeabilized with 0.1% Triton X-100 for 5 minutes and then blocked with 1% BSA/10% normal goat serum/0.3M glycine in 0.1%PBS-Tween for 1h. The cells were then incubated overnight at +4°C with ab8227 at 1μg/ml (shown in green) and ab195889, Mouse monoclonal [DM1A] to alpha Tubulin - Microtubule Marker (Alexa Fluor® 594), at 1/250 dilution (shown in red). Nuclear DNA was labelled with DAPI (shown in blue).

Image was taken with a confocal microscope (Leica-Microsystems, TCS SP8).

IHC image of beta actin staining in a section of formalin-fixed paraffin-embedded normal human colon*. The section was pre-treated using pressure cooker heat mediated antigen retrieval with sodium citrate buffer (pH6) for 30mins. The section was then incubated with ab8227, 1/1000 dilution, for 15 mins at room temperature. A goat anti-rabbit biotinylated secondary antibody (ab6720, 1/1000 dilution) was used to detect the primary, and visualized using an HRP conjugated ABC system. Streptavidin HRP was used, ab7403 at a 1/10000 dilution. DAB was used as the chromogen (ab103723), diluted 1/100 and incubated for 10min at room temperature. The section was then counterstained with haematoxylin and mounted with DPX.

The inset negative control image is taken from an identical assay without primary antibody.

For other IHC staining systems (automated and non-automated) customers should optimize variable parameters such as antigen retrieval conditions, primary antibody concentration and antibody incubation times.

*Tissue obtained from the Human Research Tissue Bank, supported by the NIHR Cambridge Biomedical Research Centre
**All lanes**: Anti-beta Actin antibody (ab8227) at 1 µg/ml

**Lane 1**: HeLa (human epithelial cell line from cervix adenocarcinoma) whole cell lysate (blocked with 2% BSA)

**Lane 2**: NIH/3T3 (mouse embryo fibroblast cell line) whole cell lysate (blocked with 2% BSA)

**Lane 3**: Rat Liver tissue lysate (blocked with 2% BSA)

**Lane 4**: HeLa whole cell lysate (blocked with 3% Milk)

**Lane 5**: NIH/3T3 whole cell lysate (blocked with 3% Milk)

**Lane 6**: Rat Liver tissue lysate (blocked with 3% Milk)

Lysates/proteins at 10 µg per lane.

**Secondary**

**All lanes**: Goat Anti-Rabbit IgG H&L (HRP) at 1/50000 dilution

Developed using the ECL technique.

Performed under reducing conditions.

**Observed band size**: 45 kDa why is the actual band size different from the predicted?

**Exposure time**: 10 seconds

Lanes 1-3: Blocked with 2% BSA

Lanes 4-6: Blocked with 3% Milk

This blot was produced using a 4-12% Bis-tris gel under the MOPS buffer system. The gel was run at 200V for 50 minutes before being transferred onto a Nitrocellulose membrane at 30V for 70 minutes.

The membrane was then blocked for an hour using 2% Bovine Serum Albumin or 3% Milk before being incubated with ab8227 overnight at 4°C. Antibody binding was detected using an anti-rabbit HRP secondary antibody, and visualised using ECL development solution ab133406
**Western blot - Anti-beta Actin antibody (ab8227)**

**All lanes**: Anti-beta Actin antibody (ab8227) at 0.1 µg/ml

**Lane 1**: HeLa (human epithelial cell line from cervix adenocarcinoma) Whole Cell Lysate

**Lane 2**: NIH/3T3 (mouse embryonic fibroblast cell line) Whole Cell Lysate

**Lane 3**: Liver (Rat) Tissue Lysate

Lysates/proteins at 10 µg per lane.

**Secondary**

**All lanes**: Goat Anti-Rabbit IgG H&L (HRP) (ab97051) at 1/50000 dilution

Performed under reducing conditions.

**Observed band size**: 42 kDa why is the actual band size different from the predicted?

**Exposure time**: 1 minute

Please note: All products are "FOR RESEARCH USE ONLY. NOT FOR USE IN DIAGNOSTIC PROCEDURES"

Our Abpromise to you: Quality guaranteed and expert technical support

- Replacement or refund for products not performing as stated on the datasheet
- Valid for 12 months from date of delivery
- Response to your inquiry within 24 hours

- We provide support in Chinese, English, French, German, Japanese and Spanish
- Extensive multi-media technical resources to help you
- We investigate all quality concerns to ensure our products perform to the highest standards

If the product does not perform as described on this datasheet, we will offer a refund or replacement. For full details of the Abpromise, please visit https://www.abcam.com/abpromise or contact our technical team.

Terms and conditions

- Guarantee only valid for products bought direct from Abcam or one of our authorized distributors
