**Product datasheet**

**Anti-BMPR2 antibody [MM0060-9A10] ab78422**

10 References  2 Images

**Overview**

**Product name**  
Anti-BMPR2 antibody [MM0060-9A10]

**Description**  
Mouse monoclonal [MM0060-9A10] to BMPR2

**Host species**  
Mouse

**Specificity**  
ab78422 detects BMPR2. No cross reactivity was found to BMPR1A and BMPR1B.

**Tested applications**  
Suitable for: WB, Flow Cyt, IHC-P

**Species reactivity**  
Reacts with: Human

**Immunogen**  
Recombinant human BMPR2 extracellular domain

**Properties**

**Form**  
Liquid

**Storage instructions**  
Shipped at 4°C. Upon delivery aliquot and store at -20°C or -80°C. Avoid repeated freeze / thaw cycles.

**Storage buffer**  
Constituent: PBS

**Purity**  
Protein G purified

**Purification notes**  
The IgG fraction of culture supernatant was purified by Protein G affinity chromatography and lyophilized from a 0.2 µm filtered solution in phosphate buffered saline (PBS).

**Clonality**  
Monoclonal

**Clone number**  
MM0060-9A10

**Isotype**  
IgG1

**Applications**

Our Abpromise guarantee covers the use of ab78422 in the following tested applications.

The application notes include recommended starting dilutions; optimal dilutions/concentrations should be determined by the end user.

| Flow Cyt    |           | Use 1-2µg for 10^6 cells.  
(methanol or paraformaldehyde fixed cells) |

| IHC-P       |           | 1/50 - 1/200. Perform enzymatic antigen retrieval before commencing with IHC staining protocol. We recommend to use Proteinase K for the enzymatic antigen retrieval. |

**Target**

**Function**

On ligand binding, forms a receptor complex consisting of two type II and two type I transmembrane serine/threonine kinases. Type II receptors phosphorylate and activate type I receptors which autophosphorylate, then bind and activate SMAD transcriptional regulators.

Binds to BMP-7, BMP-2 and, less efficiently, BMP-4. Binding is weak but enhanced by the presence of type I receptors for BMPs.

**Tissue specificity**

Highly expressed in heart and liver.

**Involvement in disease**

Defects in BMPR2 are the cause of primary pulmonary hypertension (PPH1) [MIM:178600].

PPH1 is a rare autosomal dominant disorder characterized by plexiform lesions of proliferating endothelial cells in pulmonary arterioles. The lesions lead to elevated pulmonary arterial pressure, right ventricular failure, and death. The disease can occur from infancy throughout life and it has a mean age at onset of 36 years. Penetrance is reduced. Although familial PPH1 is rare, cases secondary to known etiologies are more common and include those associated with the appetite-suppressant drugs.

Defects in BMPR2 are a cause of pulmonary venoocclusive disease (PVOD) [MIM:265450].

PVOD is a rare form of pulmonary hypertension in which the vascular changes originate in the small pulmonary veins and venules. The pathogenesis is unknown and any link with PPH1 has been speculative. The finding of PVOD associated with a BMPR2 mutation reveals a possible pathogenetic connection with PPH1.

**Sequence similarities**

Belongs to the protein kinase superfamily. TKL Ser/Thr protein kinase family. TGFB receptor subfamily.

Contains 1 protein kinase domain.

**Cellular localization**

Membrane.

**Images**
Immunohistochemistry (Formalin/PFA-fixed paraffin-embedded sections) - Anti-BMPR2 antibody [MM0060-9A10] (ab78422)

ab78422 at 1/200 dilution, staining BMPR2 in human placental tissue section by Immunohistochemistry (Formalin/PFA fixed paraffin-embedded sections).

Overlay histogram showing HepG2 cells stained with ab78422 (red line). The cells were fixed with methanol (5 min) and incubated in 1x PBS / 10% normal goat serum / 0.3M glycine to block non-specific protein-protein interactions. The cells were then incubated with the antibody (ab78422, 2µg/1x10^6 cells) for 30 min at 22°C. The secondary antibody used was DyLight® 488 goat anti-mouse IgG (H+L) (ab96879) at 1/500 dilution for 30 min at 22°C. Isotype control antibody (black line) was mouse IgG1 [ICIGG1] (ab91353, 2µg/1x10^6 cells) used under the same conditions. Acquisition of >5,000 events was performed. This antibody gave a positive signal in HepG2 cells fixed with 4% paraformaldehyde (10 min) used under the same conditions.

Please note that Abcam does not have data for use of this antibody on non-fixed cells. We welcome any customer feedback.

Please note: All products are "FOR RESEARCH USE ONLY. NOT FOR USE IN DIAGNOSTIC PROCEDURES"

Our Abpromise to you: Quality guaranteed and expert technical support

- Replacement or refund for products not performing as stated on the datasheet
- Valid for 12 months from date of delivery
- Response to your inquiry within 24 hours
- We provide support in Chinese, English, French, German, Japanese and Spanish
- Extensive multi-media technical resources to help you
• We investigate all quality concerns to ensure our products perform to the highest standards

If the product does not perform as described on this datasheet, we will offer a refund or replacement. For full details of the Abpromise, please visit https://www.abcam.com/abpromise or contact our technical team.

Terms and conditions

• Guarantee only valid for products bought direct from Abcam or one of our authorized distributors
