**Product datasheet**

**Anti-C Reactive Protein antibody ab31156**

★★★★★ 2 Abreviews  3 References  1 Image

**Overview**

**Product name**
Anti-C Reactive Protein antibody

**Description**
Rabbit polyclonal to C Reactive Protein

**Host species**
Rabbit

**Tested applications**
Suitable for: ELISA, WB, Immunoelectrophoresis, Immunodiffusion, IHC-P

**Species reactivity**
Reacts with: Human

**Immunogen**
Full length native protein (purified) (Human).

**Positive control**
This antibody gave a positive result in IHC in the following FFPE tissue: Human normal liver.

**Properties**

**Form**
Liquid

**Storage instructions**

**Storage buffer**
pH: 7.20
Preservative: 0.02% Sodium azide
Constituents: 0.0268% PBS, 0.812% Sodium chloride

**Purity**
Protein A purified

**Purification notes**
Purity was determined by SDS PAGE (blue stain), showing that the IgG constitute was greater than 90% of total protein.

**Clonality**
Polyclonal

**Isotype**
IgG

**Applications**

Our Abpromise guarantee covers the use of ab31156 in the following tested applications.

The application notes include recommended starting dilutions; optimal dilutions/concentrations should be determined by the end user.

**Function**
Displays several functions associated with host defense: it promotes agglutination, bacterial capsular swelling, phagocytosis and complement fixation through its calcium-dependent binding to phosphorylcholine. Can interact with DNA and histones and may scavenge nuclear material released from damaged circulating cells.

**Tissue specificity**
Found in plasma.

**Sequence similarities**
Belongs to the pentaxin family.
Contains 1 pentaxin domain.

**Cellular localization**
Secreted.

### Images

IHC image of C Reactive Protein staining in Human normal liver formalin fixed paraffin embedded tissue section, performed on a Leica BondTM system using the standard protocol F. The section was pre-treated using heat mediated antigen retrieval with sodium citrate buffer (pH6, epitope retrieval solution 1) for 20 mins. The section was then incubated with ab31156, 5µg/ml, for 15 mins at room temperature and detected using an HRP conjugated compact polymer system. DAB was used as the chromogen. The section was then counterstained with haematoxylin and mounted with DPX.

For other IHC staining systems (automated and non-automated) customers should optimize variable parameters such as antigen retrieval conditions, primary antibody concentration and antibody incubation times.

**Please note:** All products are "FOR RESEARCH USE ONLY. NOT FOR USE IN DIAGNOSTIC PROCEDURES"

**Our Abpromise to you:** Quality guaranteed and expert technical support
• Replacement or refund for products not performing as stated on the datasheet
• Valid for 12 months from date of delivery
• Response to your inquiry within 24 hours

• We provide support in Chinese, English, French, German, Japanese and Spanish
• Extensive multi-media technical resources to help you
• We investigate all quality concerns to ensure our products perform to the highest standards

If the product does not perform as described on this datasheet, we will offer a refund or replacement. For full details of the Abpromise, please visit https://www.abcam.com/abpromise or contact our technical team.

Terms and conditions

• Guarantee only valid for products bought direct from Abcam or one of our authorized distributors
