Product datasheet

Anti-CaMKII (phospho T286) antibody ab32678

*** 25 Abreviews  28 References  4 Images

Overview

Product name  Anti-CaMKII (phospho T286) antibody
Description  Rabbit polyclonal to CaMKII (phospho T286)
Host species  Rabbit
 Specificity  This antibody is specific for the ~50 kDa alpha CaM Kinase II subunit and the ~60 kDa beta CaM Kinase II subunit phosphorylated at Thr286 in Western blots. Immunolabeling is blocked by the phosphopeptide used as the antigen but not by the corresponding dephosphopeptide.

Tested applications  Suitable for: WB, IHC-P, IHC-Fr

Species reactivity  Reacts with: Mouse, Rat, Human, Pig, Xenopus laevis
Predicted to work with: Chicken, Cow

Immunogen  Synthetic phosphopeptide corresponding to amino acids surrounding phospho-286 from Rat brain CaMKII.

Positive control  Rat cortex lysate.

Properties

Form  Liquid

Storage instructions  Shipped at 4°C. Upon delivery aliquot and store at -20°C. Avoid freeze / thaw cycles.

Storage buffer  pH: 7.50
Constituents: 0.238% HEPES, 50% Glycerol, 0.87% Sodium chloride, 0.01% BSA

Purity  Immunogen affinity purified

Clonality  Polyclonal

Isotype  IgG

Applications

Our Abpromise guarantee covers the use of ab32678 in the following tested applications.
The application notes include recommended starting dilutions; optimal dilutions/concentrations should be determined by the end user.

Function

CaM-kinase II (CAMK2) is a prominent kinase in the central nervous system that may function in long-term potentiation and neurotransmitter release. Member of the NMDAR signaling complex in excitatory synapses it may regulate NMDAR-dependent potentiation of the AMPAR and synaptic plasticity.

Sequence similarities

Belongs to the protein kinase superfamily. CAMK Ser/Thr protein kinase family. CaMK subfamily. Contains 1 protein kinase domain.

Cellular localization

Images

Western blot - Anti-CaMKII (phospho T286) antibody (ab32678) at 1/1000 dilution

Lane 1: Human myocardium tissue lysate, heart failure
Lane 2: Human myocardium tissue lysate, hypertrophy
Lane 3: Human myocardium tissue lysate, non-failing

Lysates/proteins at 20 µg per lane.

Secondary

All lanes: HRP conjugated sheep anti-rabbit at 1/10000 dilution

Developed using the ECL technique.

Performed under reducing conditions.

Predicted band size: 50 kDa
Observed band size: 50 kDa

Exposure time: 30 seconds
Blocked with 5% milk for 1 hour at RT.

Incubated with primary antibody for 14 hours at 4°C in TBS-T20.

ab32678 (2µg/ml) staining CaMKII (phospho T286) in human Brain:cortex:frontal-lateral using an automated system (DAKO Autostainer Plus). Using this protocol there is strong staining of nuclear/cytoplasmic compartments within the stellate cells and the myelinated fibres of white matter region.

Sections were rehydrated and antigen retrieved with the Dako 3 in 1 AR buffer EDTA pH 9.0 in a DAKO PT link. Slides were peroxidase blocked in 3% H2O2 in methanol for 10 mins. They were then blocked with Dako Protein block for 10 minutes (containing casein 0.25% in PBS) then incubated with primary antibody for 20 min and detected with Dako envision flex amplification kit for 30 minutes. Colorimetric detection was completed with Diaminobenzidine for 5 minutes. Slides were counterstained with Haematoxylin and coverslipped under DePeX. Please note that, for manual staining, optimization of primary antibody concentration and incubation time is recommended. Signal amplification may be required.

PC 12 cells were incubated at 37°C for 30 minutes with vehicle control (0 µM) and different concentrations of myricetin (ab120721). Increased expression of CaMKII (phospho T286) (ab32678) in PC 12 cells correlates with an increase in myricetin concentration, as described in literature.

Whole cell lysates were prepared with RIPA buffer (containing protease inhibitors and sodium orthovanadate), 20µg of each were loaded on the gel and the WB was run under reducing conditions. After transfer the membrane was blocked for an hour using 3% milk before being incubated with ab32678at 1/500 dilution and ab52476 at 1/500 dilution overnight at 4°C. Antibody binding was detected using an anti-rabbit antibody conjugated to HRP (ab97051) at 1/10000 dilution and visualised using ECL development solution.

**All lanes** : Anti-CaMKII (phospho T286) antibody (ab32678) at 1/10000 dilution

**Lane 1** : Rat brain cortex lysate.

**Lane 2** : Rat brain cortex lysate preincubated with lambda-phosphatase.

Lysates/proteins at 50 µg per lane.
Predicted band size: 50 kDa

Observed band size: 50,60 kDa

why is the actual band size different from the predicted?

Predicted molecular weight: ~50 kDa for the alpha subunit and ~60 kDa for the beta subunit of CaMKII.

These images show the phosphospecificity of this antibody.

Please note: All products are "FOR RESEARCH USE ONLY AND ARE NOT INTENDED FOR DIAGNOSTIC OR THERAPEUTIC USE"

Our Abpromise to you: Quality guaranteed and expert technical support

- Replacement or refund for products not performing as stated on the datasheet
- Valid for 12 months from date of delivery
- Response to your inquiry within 24 hours
- We provide support in Chinese, English, French, German, Japanese and Spanish
- Extensive multi-media technical resources to help you
- We investigate all quality concerns to ensure our products perform to the highest standards

If the product does not perform as described on this datasheet, we will offer a refund or replacement. For full details of the Abpromise, please visit https://www.abcam.com/abpromise or contact our technical team.

Terms and conditions

- Guarantee only valid for products bought direct from Abcam or one of our authorized distributors
