**Product datasheet**

**Anti-Endothelial Cell antibody [RECA-1] ab9774**

★★★★★ 17 Abreviews  67 References  4 Images

**Overview**

**Product name**  Anti-Endothelial Cell antibody [RECA-1]

**Description**  Mouse monoclonal [RECA-1] to Endothelial Cell

**Host species**  Mouse

**Tested applications**  Suitable for: ICC/IF, IHC-P, IHC-G, IHC-Fr, IHC-FrFl

**Species reactivity**  Reacts with: Rat

**Immunogen**  corresponding to Endothelial Cell.

**Positive control**  Rat brain FFPE section (IHC)

**General notes**

RECA-1 reacts with rat endothelial cell antigen and showed to be reactive with all vascular endothelium in three tested rat strains of different MHC-haplotype; Lewis (TR-11), BN (RT-1n) and OA (RT-1u). RECA-1 recognises a cell surface antigen. The antibody has been successfully applied in staining of viable endothelial cells in vitro, and of vascular endothelium in vivo. No reactivity of RECA-1 was seen with other cells e.g. fibroblasts, leukocytes and non endothelial stromal cells nor with other various tested species other than rat e.g. mouse, rabbit, sheep, goat and human. RECA-1 is a promising antibody for rat endothelial cell studies, and in particular for further defining nature and function of endothelial cell-specific antigens.

This antibody clone is manufactured by Abcam. If you require this antibody in a particular buffer formulation or a particular conjugate for your experiments, please contact orders@abcam.com or you can find further information here.

**Properties**

**Form**  Liquid

**Storage instructions**  Shipped at 4°C. Store at +4°C short term (1-2 weeks). Upon delivery aliquot. Store at -20°C long term.

**Storage buffer**  pH: 7.40
Preservative: 0.02% Sodium azide
Constituents: PBS, 6.97% L-Arginine

**Purity**  Immunogen affinity purified

**Primary antibody notes**  RECA-1 reacts with rat endothelial cell antigen and showed to be reactive with all vascular endothelium in three tested rat strains of different MHC-haplotype; Lewis (TR-11), BN (RT-1n) and OA (RT-1u). RECA-1 recognises a cell surface antigen. The antibody has been successfully applied in staining of viable endothelial cells in vitro, and of vascular endothelium in vivo. No
reactivity of RECA-1 was seen with other cells e.g. fibroblasts, leukocytes and non endothelial stromal cells nor with other various tested species other than rat e.g. mouse, rabbit, sheep, goat and human. RECA-1 is a promising antibody for rat endothelial cell studies, and in particular for further defining nature and function of endothelial cell-specific antigens.

Clonality
Monoclonal

Clone number
RECA-1

Isotype
IgG1

Applications

Our Abpromise guarantee covers the use of ab9774 in the following tested applications.

The application notes include recommended starting dilutions; optimal dilutions/concentrations should be determined by the end user.

Target

Relevance
The endothelium is a single layer of cells lining various organs and cavities of the body, especially the blood vessels, heart, and lymphatic vessels. Endothelial cells line the entire circulatory system, from the heart to the smallest capillary. Endothelial cells are involved in many aspects of vascular biology, such as vasoconstriction and vasodilation, and hence the control of blood pressure; blood clotting (thrombosis & fibrinolysis); atherosclerosis; formation of new blood vessels (angiogenesis) and inflammation and swelling (oedema). Endothelial cells also control the passage of materials, and the transit of white blood cells, into and out of the bloodstream.
IHC image of Endothelial Cell staining in Rat brain FFPE section, performed on a BondTM system using the standard protocol F. The section was pre-treated using heat mediated antigen retrieval with sodium citrate buffer (pH6, epitope retrieval solution 1) for 20 mins. The section was then incubated with ab9774, 5µg/ml, for 15 mins at room temperature and detected using an HRP conjugated compact polymer system. DAB was used as the chromogen. The section was then counterstained with haematoxylin and mounted with DPX.

Frozen sectioned rat brain tissue stained for Endothelial Cells using ab9774 at 1/400 dilution in immunohistochemical analysis.
ab9774 staining cells of rat liver sections by IHC-Fr. Cells were acetone fixed and blocked with 1% BSA for 5 minutes at 25°C prior to incubating with ab9774 diluted 1/25 for 30 minutes at 25°C. An Alexa Fluor® 488 conjugated goat anti-mouse antibody was used as the secondary.

Double IIF labeling with RECA-1 (Green) and dipeptidyl peptidase IV (Red)

ab9774 staining endothelial cells in Rat lung tissue by Immunohistochemistry (Frozen sections). The sections were fixed in acetone prior to blocking with 100% SuperBlock Blocking Buffer for 20 minutes at 23°C. The primary antibody was diluted 1/100 and incubated with the sample for 12 hours at 4°C. A Biotin-conjugated Rabbit anti-Mouse polyclonal was used as the secondary antibody, diluted 1/200.

Please note: All products are "FOR RESEARCH USE ONLY. NOT FOR USE IN DIAGNOSTIC PROCEDURES"

Our Abpromise to you: Quality guaranteed and expert technical support

- Replacement or refund for products not performing as stated on the datasheet
- Valid for 12 months from date of delivery
- Response to your inquiry within 24 hours
- We provide support in Chinese, English, French, German, Japanese and Spanish
- Extensive multi-media technical resources to help you
- We investigate all quality concerns to ensure our products perform to the highest standards

If the product does not perform as described on this datasheet, we will offer a refund or replacement. For full details of the Abpromise, please visit https://www.abcam.com/abpromise or contact our technical team.

Terms and conditions

- Guarantee only valid for products bought direct from Abcam or one of our authorized distributors
