**Product datasheet**

**Anti-Hepatitis B Virus pre S2 Antigen antibody [S26] ab8635**

**Overview**

**Product name**
Anti-Hepatitis B Virus pre S2 Antigen antibody [S26]

**Description**
Mouse monoclonal [S26] to Hepatitis B Virus pre S2 Antigen

**Host species**
Mouse

**Specificity**
This antibody reacts with HBV Large and Middle Surface Antigen but not small forms (both glycosylated and non glycosylated species).

**Tested applications**
Suitable for: ELISA, IHC-FoFr, IHC-Fr, Immunomicroscopy, IP, IHC-P, WB, ICC/IF

**Immunogen**
Purified serum HBV surface antigen

**Epitope**
aa positions 131-139 (adw nomenclature)

**Properties**

**Form**
Liquid

**Storage instructions**
Shipped at 4°C. Store at +4°C short term (1-2 weeks). Upon delivery aliquot. Store at -20°C or -80°C. Avoid freeze / thaw cycle.

**Clonality**
Monoclonal

**Clone number**
S26

**Myeloma**
Sp2/0

**Isotype**
IgG1

**Light chain type**
kappa

**Applications**

Our Abpromise guarantee covers the use of ab8635 in the following tested applications.
The application notes include recommended starting dilutions; optimal dilutions/concentrations should be determined by the end user.

The human hepatitis B virus (HBV) is a DNA virus that causes chronic infections that frequently lead to the development of cirrhosis and cellular hepatocellular carcinoma. The HBsAg (surface antigen) gene is one long open reading frame but contains three in frame “start” (ATG) codons that divide the gene into three sections, pre-S1, pre-S2, and S. Because of the multiple start codons, polypeptides of three different sizes called large, middle, and small (pre-S1 + pre-S2 + S, pre-S2 + S, or S) are produced. The preS2 domain is the minimal functional unit of transcription activators that are encoded by the Hepatitis B virus (HBV) surface (S) gene. It is present in more than one-third of the HBV-integrates in HBV induced hepatocarcinoma (HCC). Pre-S2 is a diagnostically important surface antigen of human hepatitis B virus. The PreS domain (S1 + S2) of Hepatitis B virus (HBV) surface antigen may be a good candidate for an effective vaccine as it activates both B and T cells besides binding to hepatocytes.
dilution

Developed using the ECL technique.

Performed under reducing conditions.

**Observed band size:** 33, 36, 39 kDa

**why is the actual band size different from the predicted?**

**Exposure time:** 10 minutes

Immunofluorescence analysis of mutant pHBV-env–transfected Huh-7 cells, staining Hepatitis B Virus pre S2 Antigen with ab8635.

Cells were fixed with 4% paraformaldehyde and permeabilized with saponin 0.1%. Cells were incubated with primary antibody (1/500) for 2 hours at room temperature. An Alexa Fluor®555–conjugated goat anti-mouse IgG (1/1000) was used as the secondary antibody.

**Our Abpromise to you: Quality guaranteed and expert technical support**

- Replacement or refund for products not performing as stated on the datasheet
- Valid for 12 months from date of delivery
- Response to your inquiry within 24 hours
- We provide support in Chinese, English, French, German, Japanese and Spanish
- Extensive multi-media technical resources to help you
- We investigate all quality concerns to ensure our products perform to the highest standards

If the product does not perform as described on this datasheet, we will offer a refund or replacement. For full details of the Abpromise, please visit [https://www.abcam.com/abpromise](https://www.abcam.com/abpromise) or contact our technical team.

**Terms and conditions**
• Guarantee only valid for products bought direct from Abcam or one of our authorized distributors
