**Sample type**

- Cell culture supernatant, Saliva, Milk, Urine, Serum, Heparin Plasma, EDTA Plasma, Citrate Plasma, Tissue Lysate

**Assay type**

- Sandwich (quantitative)

**Sensitivity**

- 0.02 ng/ml

**Range**

- 0.23 ng/ml - 15 ng/ml

**Recovery**

### Sample type | Average % | Range
---|---|---
Heparin Plasma | 100 | 100% - 100%
EDTA Plasma | 90.17 | 87% - 93%
Citrate Plasma | 100 | 98% - 102%

**Assay time**
1h 30m

**Assay duration**
One step assay

**Species reactivity**
- **Reacts with:** Human, Rhesus monkey
- **Does not react with:** Mouse, Rat, Sheep, Rabbit, Goat, Guinea pig, Hamster, Cow, Dog

**Product overview**
Abcam’s Human IgG *in vitro* SimpleStep ELISA™ (Enzyme-Linked Immunosorbent Assay) kit is designed for the quantitative measurement of IgG protein in Human serum, plasma, milk, urine, saliva, culture media and tissue extracts.

The SimpleStep ELISA™ employs an affinity tag labeled capture antibody and a reporter conjugated detector antibody which immunocapture the sample analyte in solution. This entire complex (capture antibody/analyte/detector antibody) is in turn immobilized via immunoaffinity of an anti-tag antibody coating the well. To perform the assay, samples or standards are added to the wells, followed by the antibody mix. After incubation, the wells are washed to remove unbound material. TMB substrate is added and during incubation is catalyzed by HRP, generating blue coloration. This reaction is then stopped by addition of Stop Solution completing any color change from blue to yellow. Signal is generated proportionally to the amount of bound analyte and the intensity is measured at 450 nm. Optionally, instead of the endpoint reading, development of TMB can be recorded kinetically at 600 nm.

**Notes**
Immunoglobulin G (IgG) is a glycoprotein molecule which belongs to the immunoglobulin family of proteins known as antibodies. Immunoglobulins are the key component of humoral immunity. IgG has an approximate molecular weight of about 150kDa and it is composed of four peptide chains: two identical heavy chains (γ) of about 50kDa and two identical light chains (κ) of about 25kDa each. The heavy chains are linked to each other and to the light chain by disulfide bonds. At the N terminus, both the heavy and the light chain contain variable regions (VH and VL) which account for antibody diversity. At the C terminus, both chains contain constant regions (CH and CL) but only CH mediates effector functions. Structurally the IgG molecule may be divided into: (1) the Fragment antigen binding region (Fab) containing the VL, VH, CL and CH2 all of which shape the antigen binding site and (2) the Fragment crystallizable region (Fc) containing CH domains 2 – 4 which stabilize the antibody and bind to the Fc receptor on the surface of macrophages, neutrophils, natural killer cells as well as to complement proteins to mediate therefore physiological effects.

IgG is synthesized and secreted by plasma B cells in response to an immunogen after recognition of specific epitopes on the antigen and it is generated following class switching and maturation of an antibody response, thus providing immune protection. There are four subclasses of IgG in humans (IgG 1, 2, 3, 4) with variable affinity to Fc receptors and complement. The levels of IgG are generally considered to be indicative of an individual’s immune status and are found increased in all types of infections, liver disease, severe malnutrition, dysproteinemia and rheumatoid arthritis. It is decrease in conditions such as hypogammaglobulinemia, X-linked agammaglobulinemia, lymphoid aplasia and chronic lymphoblastic leukemia. IgG accounts for 75% of the total human protein and can be found in serum, lymphatic fluid, cerebrospinal fluid, colostrum, milk, urine, saliva, sweat and body tissues. IgG has been shown to bind some bacterial strains from
cutaneous microbiota.
The Fc portion of human IgG is frequently used as the basis of prolonged pharmacokinetics as it is used as a fusion partner to extend the half-life of fusion proteins.

**Tested applications**

**Suitable for:** Sandwich ELISA

**Platform**

Microplate

### Properties

### Storage instructions

Store at +4°C. Please refer to protocols.

### Applications

Our Abpromise guarantee covers the use of **ab195215** in the following tested applications.

The application notes include recommended starting dilutions; optimal dilutions/concentrations should be determined by the end user.

### Images
SimpleStep ELISA technology allows the formation of the antibody-antigen complex in one single step, reducing assay time to 90 minutes. Add samples or standards and antibody mix to wells all at once, incubate, wash, and add your final substrate. See protocol for a detailed step-by-step guide.

Background-subtracted data values (mean +/- SD) are graphed.

Ten individual healthy donors were evaluated for the presence of IgG in serum using this assay. Results were interpolated from the standard curve in Sample Diluent NS and corrected for sample dilution (1:5x10^6). The mean level of IgG was found at 12.5 mg/mL with a range of 9 – 18.4 mg/mL.
Bodily fluids from 3 different donors were evaluated for the presence of IgG using this assay. Results were interpolated from the standard curve in sample diluent NS and corrected for sample dilution (1:2.5x10^4). The mean levels in Milk were found at 20.7 µg/mL, in Urine at 0.8 µg/mL and in Saliva at 11.1 µg/mL.

Human IgG1, IgG2, IgG3 and IgG4 were tested at 5ng/mL

Please note: All products are "FOR RESEARCH USE ONLY. NOT FOR USE IN DIAGNOSTIC PROCEDURES"

Our Abpromise to you: Quality guaranteed and expert technical support

- Replacement or refund for products not performing as stated on the datasheet
- Valid for 12 months from date of delivery
- Response to your inquiry within 24 hours
- We provide support in Chinese, English, French, German, Japanese and Spanish
- Extensive multi-media technical resources to help you
- We investigate all quality concerns to ensure our products perform to the highest standards

If the product does not perform as described on this datasheet, we will offer a refund or replacement. For full details of the Abpromise, please visit https://www.abcam.com/abpromise or contact our technical team.

Terms and conditions

- Guarantee only valid for products bought direct from Abcam or one of our authorized distributors
