Anti-IL-21 antibody ab53655

Overview

Product name: Anti-IL-21 antibody
Description: Goat polyclonal to IL-21
Host species: Goat
Tested applications: Suitable for: IHC-P, ELISA, ICC
Species reactivity: Reacts with: Human
Immunogen: Synthetic peptide corresponding to Human IL-21 aa 78-109.
Sequence: CFQKAQLKSANTGNNERIINVSIKKLKRKPPS
Positive control: Human spleen and human tonsil. IHC-P: human hodgkins lymphoma FFPE tissue sections

Properties

Form: Liquid
Storage instructions: Shipped at 4°C. Upon delivery aliquot. Avoid freeze / thaw cycle.
Storage buffer: Preservative: 0.1% Sodium Azide
Constituents: PBS, 1mg/ml BSA, pH 7.2
Purity: Immunogen affinity purified
Clonality: Polyclonal
Isotype: IgG

Applications

Our Abpromise guarantee covers the use of ab53655 in the following tested applications.
The application notes include recommended starting dilutions; optimal dilutions/concentrations should be determined by the end user.

**Target**

**Function**
Cytokine with immunoregulatory activity. May promote the transition between innate and adaptive immunity. Induces the production of IgG(1) and IgG(3) in B-cells (By similarity). May play a role in proliferation and maturation of natural killer (NK) cells in synergy with IL15. May regulate proliferation of mature B- and T-cells in response to activating stimuli. In synergy with IL15 and IL18 stimulates interferon gamma production in T-cells and NK cells. During T-cell mediated immune response may inhibit dendritic cells (DC) activation and maturation.

**Tissue specificity**
Expressed in activated CD4-positive T-cells but not in CD8-positive T-cells, B-cells, or monocytes.

**Sequence similarities**
Belongs to the IL-15/IL-21 family.

**Cellular localization**
Secreted.

**Images**

IHC image of IL-21 staining in human Hodgkin lymphoma formalin fixed paraffin embedded tissue section, performed on a Leica Bond™ system using the standard protocol B. The section was pre-treated using heat mediated antigen retrieval with sodium citrate buffer (pH6, epitope retrieval solution 1) for 20 mins. The section was then incubated with ab53655, 5µg/ml, for 15 mins at room temperature. A donkey anti-goat biotinylated secondary antibody was used to detect the primary, and visualized using an HRP conjugated ABC system. DAB was used as the chromogen. The section was then counterstained with haematoxylin and mounted with DPX.

For other IHC staining systems (automated and non-automated) customers should optimize variable parameters such as antigen retrieval conditions, primary antibody concentration and antibody incubation times.

**Please note:** All products are "FOR RESEARCH USE ONLY. NOT FOR USE IN DIAGNOSTIC PROCEDURES"

**Our Abpromise to you:** Quality guaranteed and expert technical support
• Replacement or refund for products not performing as stated on the datasheet
• Valid for 12 months from date of delivery
• Response to your inquiry within 24 hours

• We provide support in Chinese, English, French, German, Japanese and Spanish
• Extensive multi-media technical resources to help you
• We investigate all quality concerns to ensure our products perform to the highest standards

If the product does not perform as described on this datasheet, we will offer a refund or replacement. For full details of the Abpromise, please visit [https://www.abcam.com/abpromise](https://www.abcam.com/abpromise) or contact our technical team.

**Terms and conditions**

• Guarantee only valid for products bought direct from Abcam or one of our authorized distributors
