**General notes**

Reproducibility is key to advancing scientific discovery and accelerating scientists' next breakthrough.

Abcam is leading the way with our range of recombinant antibodies, knockout-validated antibodies and knockout cell lines, all of which support improved reproducibility.

We are also planning to innovate the way in which we present recommended applications and species on our product datasheets, so that only applications & species that have been tested in our own labs, our suppliers or by selected trusted collaborators are covered by our Abpromise™ guarantee.

In preparation for this, we have started to update the applications & species that this product is Abpromise guaranteed for.

We are also updating the applications & species that this product has been “predicted to work with,” however this information is not covered by our Abpromise guarantee.

Applications & species from publications and Abreviews that have not been tested in our own labs or in those of our suppliers are not covered by the Abpromise guarantee.

Western blot - Anti-MOS antibody (ab234990)

Anti-MOS antibody (ab234990) at 1/500 dilution + Jurkat (human T cell leukemia cell line from peripheral blood) whole cell lysate

### Secondary

Goat polyclonal to rabbit IgG at 1/50000 dilution

**Predicted band size:** 38 kDa

Immunohistochemistry (Formalin/PFA-fixed paraffin-embedded sections) - Anti-MOS antibody (ab234990)

Paraffin-embedded human testis tissue stained for MOS using ab234990 at 1/400 dilution in immunohistochemical analysis.

After dewaxing and hydration, antigen retrieval was mediated by high pressure in a citrate buffer (pH 6.0). Section was blocked with 10% normal goat serum 30min at RT. Then primary antibody (1% BSA) was incubated at 4°C overnight. The primary is detected by a biotinylated secondary antibody and visualized tissue using an HRP conjugated SP system.
