Overview

<b>Product name</b>	Mouse/Rat B7-H4 Antibody Pair - BSA and Azide free
<b>Assay type</b>	ELISA set
<b>Range</b>	46.875 pg/ml - 3000 pg/ml
<b>Product overview</b>	<p>The Antibody Pair can be used to quantify Mouse/Rat B7-H4. BSA and Azide free antibody pairs include unconjugated capture and detector antibodies suitable for sandwich ELISAs. The antibodies are provided at an approximate concentration of 1 mg/ml as measured by the protein A280 method. The recommended antibody orientation is based on internal optimization for ELISA-based assays. Antibody orientation is assay dependent and needs to be optimized for each assay type. Both capture and detector antibodies are rabbit monoclonal antibodies delivering consistent, specific, and sensitive results.</p>

For additional information on the performance of the antibody pair, see the equivalent SimpleStep ELISA® Kit ([ab263879](#)), which uses the same antibodies. However, due to differences in their formulation, this antibody pair cannot be used with the consumables provided with our SimpleStep ELISA Kits. Please note that the range provided for the pairs is only an estimation based on the performance of the related product using the same antibody pair. Performance of the antibody pair will depend on the specific characteristics of your assay. We guarantee the product works in sandwich ELISA, but we do not guarantee the sensitivity or dynamic range of the antibody pair in your assay.

<b>Carrier free</b>	Yes

Components	10 x 96 tests
Mouse/Rat B7-H4 Capture Antibody (unconjugated)	1 x 100µg
Mouse/Rat B7-H4 Detector Antibody (unconjugated)	1 x 100µg

<b>Function</b>	Negatively regulates T-cell-mediated immune response by inhibiting T-cell activation, proliferation, cytokine production and development of cytotoxicity. When expressed on the cell surface of tumor macrophages, plays an important role, together with regulatory T-cells (Treg), in the suppression of tumor-associated antigen-specific T-cell immunity. Involved in promoting epithelial cell transformation.
<b>Tissue specificity</b>	Overexpressed in breast, ovarian, endometrial, renal cell (RCC) and non-small-cell lung cancers (NSCLC). Expressed on activated T- and B-cells, monocytes and dendritic cells, but not expressed in most normal tissues (at protein level). Widely expressed, including in kidney, liver, lung, ovary, placenta, spleen and testis.
<b>Sequence similarities</b>	Belongs to the immunoglobulin superfamily. BTN/MOG family. Contains 2 Ig-like V-type (immunoglobulin-like) domains.
<b>Post-translational modifications</b>	N-glycosylated.
<b>Cellular localization</b>	Cell membrane. Expressed at the cell surface. A soluble form has also been detected.
