Product datasheet

Anti-NEDD4-2 antibody ab46521

Overview

Product name: Anti-NEDD4-2 antibody
Description: Rabbit polyclonal to NEDD4-2
Host species: Rabbit
Tested applications: Suitable for: IHC-P, ICC, ICC/IF, WB
Species reactivity: Reacts with: Mouse, Rat, Human, Xenopus laevis
Immunogen: Recombinant fusion protein (Mouse)

Properties

Form: Liquid
Storage instructions: Shipped at 4°C. Store at +4°C short term (1-2 weeks). Upon delivery aliquot. Store at -20°C or -80°C. Avoid freeze / thaw cycle.
Storage buffer: Preservative: None
Purity: Whole antiserum
Clonality: Polyclonal
Isotype: IgG

Applications

Our Abpromise guarantee covers the use of ab46521 in the following tested applications.
The application notes include recommended starting dilutions; optimal dilutions/concentrations should be determined by the end user.

**Function**

E3 ubiquitin-protein ligase which accepts ubiquitin from an E2 ubiquitin-conjugating enzyme in the form of a thioester and then directly transfers the ubiquitin to targeted substrates. Inhibits TGF-beta signaling by triggering SMAD2 and TGFBR1 ubiquitination and proteasome-dependent degradation. Promotes ubiquitination and internalization of various plasma membrane channels such as ENaC, Nav1.2, Nav1.3, Nav1.5, Nav1.7, Nav1.8, Kv1.3, EAAT1 or CLC5. Promotes ubiquitination and degradation of SGK1 and TNK2.

**Tissue specificity**

Ubiquitously expressed, with highest levels in prostate, pancreas and kidney.

**Pathway**

Protein modification; protein ubiquitination.

**Sequence similarities**

Contains 1 C2 domain.
Contains 1 HECT (E6AP-type E3 ubiquitin-protein ligase) domain.
Contains 4 WW domains.

**Post-translational modifications**

Phosphorylated by SGK1 or PKA; which impairs interaction with SCNN. Interaction with YWHAH inhibits dephosphorylation.
Auto-ubiquitinated.

**Cellular localization**

Cytoplasm. May be recruited to exosomes by NDFIP1.

**Target**

E3 ubiquitin-protein ligase which accepts ubiquitin from an E2 ubiquitin-conjugating enzyme in the form of a thioester and then directly transfers the ubiquitin to targeted substrates. Inhibits TGF-beta signaling by triggering SMAD2 and TGFBR1 ubiquitination and proteasome-dependent degradation. Promotes ubiquitination and internalization of various plasma membrane channels such as ENaC, Nav1.2, Nav1.3, Nav1.5, Nav1.7, Nav1.8, Kv1.3, EAAT1 or CLC5. Promotes ubiquitination and degradation of SGK1 and TNK2.

Ubiquitously expressed, with highest levels in prostate, pancreas and kidney.

Protein modification; protein ubiquitination.

Contains 1 C2 domain.
Contains 1 HECT (E6AP-type E3 ubiquitin-protein ligase) domain.
Contains 4 WW domains.

Phosphorylated by SGK1 or PKA; which impairs interaction with SCNN. Interaction with YWHAH inhibits dephosphorylation.
Auto-ubiquitinated.

Cytoplasm. May be recruited to exosomes by NDFIP1.

**Western blot** - Anti-NEDD4-2 antibody (ab46521)

**All lanes**: Anti-NEDD4-2 antibody (ab46521)

**Lane 1**: Extract from non-transfected HEK293 cells
**Lane 2**: Extract from HEK293 cells transfected with NEDD4-2

**Predicted band size**: 120 kDa
**Observed band size**: 120 kDa

2008 Abcam: Western blot - Anti-NEDD4-2 antibody (ab46521)
**Immunohistochemistry (Formalin/PFA-fixed paraffin-embedded sections)** - Anti-NEDD4-2 antibody (ab46521) 

*ab46251 (1/1000) staining NEDD4-2 in human colon using an automated system (DAKO Autostainer Plus). Using this protocol there is strong cytoplasmic and membrane staining of the intestinal glands cells.*

Sections were rehydrated and antigen retrieved with the Dako 3 in 1 AR buffer EDTA pH 9.0 in a DAKO PT link. Slides were peroxidase blocked in 3% H2O2 in methanol for 10 mins. They were then blocked with Dako Protein block for 10 minutes (containing casein 0.25% in PBS) then incubated with primary antibody for 20 min and detected with Dako envision flex amplification kit for 30 minutes. Colorimetric detection was completed with Diaminobenzidine for 5 minutes. Slides were counterstained with Haematoxylin and coverslipped under DePeX. Please note that, for manual staining, optimization of primary antibody concentration and incubation time is recommended. Signal amplification may be required.

**Immunocytochemistry/ Immunofluorescence - Anti-NEDD4-2 antibody (ab46521)**

*ICC/IF image of ab46521 stained HeLa cells. The cells were 100% methanol fixed (5 min) and then incubated in 1%BSA / 10% normal goat serum / 0.3M glycine in 0.1% PBS-Tween for 1h to permeabilise the cells and block non-specific protein-protein interactions. The cells were then incubated with the antibody (ab46521, 5µg/ml) overnight at +4°C. The secondary antibody (green) was Alexa Fluor® 488 goat anti-rabbit IgG (H+L) used at a 1/1000 dilution for 1h. Alexa Fluor® 594 WGA was used to label plasma membranes (red) at a 1/200 dilution for 1h. DAPI was used to stain the cell nuclei (blue) at a concentration of 1.43µM.*

**Please note:** All products are “FOR RESEARCH USE ONLY. NOT FOR USE IN DIAGNOSTIC PROCEDURES”

**Our Abpromise to you:** Quality guaranteed and expert technical support

- Replacement or refund for products not performing as stated on the datasheet
- Valid for 12 months from date of delivery
- Response to your inquiry within 24 hours
• We provide support in Chinese, English, French, German, Japanese and Spanish
• Extensive multi-media technical resources to help you
• We investigate all quality concerns to ensure our products perform to the highest standards

If the product does not perform as described on this datasheet, we will offer a refund or replacement. For full details of the Abpromise, please visit https://www.abcam.com/abpromise or contact our technical team.

Terms and conditions

• Guarantee only valid for products bought direct from Abcam or one of our authorized distributors
