Product overview Phospholipase A2 Assay Kit (ab133089) provides an accurate and convenient method for

measurement of PLA2 activity. This assay uses the 1,2-dithio analog of diheptanoyl

phosphatidylcholine which serves as a substrate for most PLA2s (e.g., bee and cobra venoms, pancreatic, etc.) with the exception of cytosolic PLA2. Upon hydrolysis of the thio ester bond at the sn-2 position by PLA2, free thiols are detected using DTNB (5,5'-dithio-bis-(2-nitrobenzoic acid)).

If you want to detect cytosolic PLA2, we recommend using Cytosolic Phospholipase A2 Assay

Kit (ab133090).

Notes Abcam has not and does not intend to apply for the REACH Authorisation of customers' uses of

products that contain European Authorisation list (Annex XIV) substances.

It is the responsibility of our customers to check the necessity of application of REACH

Authorisation, and any other relevant authorisations, for their intended uses.

**Function** Thought to participate in the regulation of the phospholipid metabolism in biomembranes

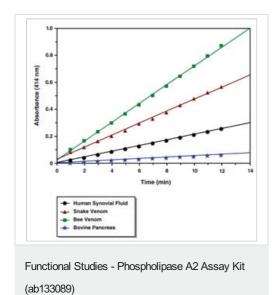

including eicosanoid biosynthesis. Catalyzes the calcium-dependent hydrolysis of the 2-acyl

groups in 3-sn-phosphoglycerides.

**Sequence similarities**Belongs to the phospholipase A2 family.

**Cellular localization** Membrane.
