Product datasheet

HRP Anti-Respiratory Syncytial Virus antibody ab20686

3 References

Overview

Product name HRP Anti-Respiratory Syncytial Virus antibody

Description HRP Goat polyclonal to Respiratory Syncytial Virus

Host species Goat
Conjugation HRP

Tested applications
Suitable for: IHC-P, ELISA, Neutralising
Species reactivity
Reacts with: Respiratory syncytial virus

Immunogen Tissue, cells or virus corresponding to Respiratory Syncytial Virus. Human Respiratory Syncytial

Virus isolate.

General notesCovalently coupled to a highly purified preparation of Horseradish Peroxidase (RZ>3). Care is

taken to ensure adequate conjugation while preserving maximum enzyme activity. Free enzyme is

removed.

The Life Science industry has been in the grips of a reproducibility crisis for a number of years.

Abcam is leading the way in addressing this with our range of recombinant monoclonal antibodies and knockout edited cell lines for gold-standard validation. Please check that this product meets

your needs before purchasing.

If you have any questions, special requirements or concerns, please send us an inquiry and/or contact our Support team ahead of purchase. Recommended alternatives for this product can be

found below, along with publications, customer reviews and Q&As

Properties

Form Liquid

Storage instructions Shipped at 4°C. Store at +4°C.

Storage buffer Preservative: 0.002% Thimerosal (merthiolate)

Constituents: PBS, 1% BSA

Purity lgG fraction
Clonality Polyclonal

Isotype IgG

Applications

The Abpromise guarantee

Our **Abpromise guarantee** covers the use of ab20686 in the following tested applications.

The application notes include recommended starting dilutions; optimal dilutions/concentrations should be determined by the end user.

Application	Abreviews	Notes
IHC-P		Use at an assay dependent dilution.
ELISA		1/200 - 1/1000.
Neutralising		1/256.

Target

Relevance

Respiratory syncytial virus (RSV) is a major cause of respiratory illness in young children. RSV infection produces a variety of signs and symptoms involving different areas of the respiratory tract, from the nose to the lungs. RSV is a negative sense, enveloped RNA virus. The virion is variable in shape and size with average diameter of between 120 and 300 nm. The 63 kD RSV fusion protein of the RSS 2 strain (subtype A) directs fusion of viral and cellular membranes, results in viral penetration, and can direct fusion of infected cells with adjoining cells, resulting in the formation of syncytia or multi nucleated giant cells.

Cellular localization

Virion. Host cytoplasm

Our Abpromise to you: Quality guaranteed and expert technical support

- · Replacement or refund for products not performing as stated on the datasheet
- · Valid for 12 months from date of delivery
- Response to your inquiry within 24 hours
- We provide support in Chinese, English, French, German, Japanese and Spanish
- · Extensive multi-media technical resources to help you
- · We investigate all quality concerns to ensure our products perform to the highest standards

If the product does not perform as described on this datasheet, we will offer a refund or replacement. For full details of the Abpromise, please visit https://www.abcam.com/abpromise or contact our technical team.

Terms and conditions

· Guarantee only valid for products bought direct from Abcam or one of our authorized distributors
