## Target

### Relevance

Transforming acidic coiled coil proteins are a conserved family of centrosome and microtubule interacting proteins that are implicated in cancer. This gene encodes a protein that concentrates at centrosomes throughout the cell cycle. This gene lies within a chromosomal region associated with tumorigenesis. Expression of this gene is thought to affect the progression of breast tumors. Expression of this gene is also induced by erythropoietin.

### Cellular localization

Cytoplasm. Nucleus. Cytoplasm, cytoskeleton, centrosome
