## Applications

**The Abpromise guarantee** Our **Abpromise guarantee** covers the use of ab134959 in the following tested applications. The application notes include recommended starting dilutions; optimal dilutions/concentrations should be determined by the end user.

Application	Abreviews	Notes
WB	★ ★ ★ ★ ★ (1)	1/1000 - 1/10000. Predicted molecular weight: 37 kDa.

**Application notes** Is unsuitable for IHC-P or IP.

## Target

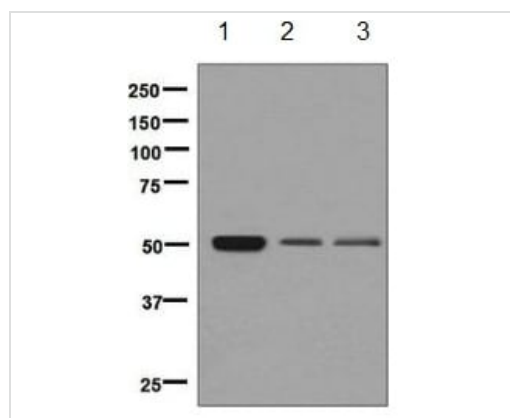

**Function** Receptor for thromboxane A2 (TXA2), a potent stimulator of platelet aggregation. The activity of this receptor is mediated by a G-protein that activates a phosphatidylinositol-calcium second messenger system. In the kidney, the binding of TXA2 to glomerular TP receptors causes intense vasoconstriction. Activates phospholipase C. Isoform 1 activates adenylyl cyclase. Isoform 2 inhibits adenylyl cyclase.

**Involvement in disease** Defects in TBXA2R are the cause of susceptibility to bleeding disorder platelet-type 13 (BDPLT13) [MIM:614009]. BDPLT13 is a disorder characterized by reduced platelet aggregation and a tendency to mild mucocutaneous bleeding.

**Sequence similarities** Belongs to the G-protein coupled receptor 1 family.

**Cellular localization** Cell membrane.
