## Human IgE protein (Azide free) ab65866

\*\*\*\*\* 2 Abreviews 10 References 2 Images

Description	
Product name	Human lgE protein (Azide free)
Biological activity	1 mg of ab65866 is 380,000± 50,000 IU/ml.
Purity	<ul> <li>&gt; 90 % SDS-PAGE.</li> <li>Human IgE full length protein was purified by Protein L chromatography. As the IgE comes from a monoclonal cell line, there is no contamination of antibodies of other isotypes. The remaining contaminants are mainly components from Foetal Bovine Serum.</li> </ul>
Endotoxin level	< 25.000 Eu/mg
Accession	<u>P0D0X4</u> <u>P0D0X7</u>
Protein length	Full length protein
Animal free	No
Nature	Synthetic
Amino Acid Sequence 1	
Species	Human
Additional sequence information	Observed band of ~185kDa on SDS-PAGE
Amino Acid Sequence 2	
Species	Human
Description	Native Human IgE protein (Azide free)

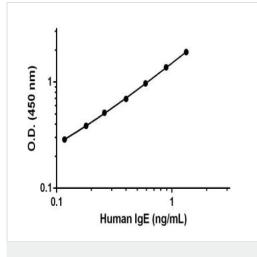

#### Specifications

Our Abpromise guarantee covers the use of ab65866 in the following tested applications.

The application notes include recommended starting dilutions; optimal dilutions/concentrations should be determined by the end user.

Applications	SDS-PAGE
	IHC - Wholemount
	Western blot
	ELISA
	Immunocytochemistry
Form	Liquid

Additional notes	This product is purified Human IgE with kappa light chains produced <i>in vitro</i> from a monoclonal hybridoma.
	This antigen is quite unique, because it is the only available IgE product, which originates from a human monoclonal cell line. Our IgE product shows superior advantage when compared to the traditionally purified polyclonal IgE from myeloma patients. A comparison which is highly superior on the following key parameters:.
	- Low batch-to-batch variation
	- Higher degree of purity (>90%)
	- A more uniform product (monoclonal and not polyclonal)
	Low endotoxin levels below < 25 EU/mg allow use of lgE protein in cellular immunology and in cell proliferation studies.
Preparation and Storage	
Stability and Storage	Shipped at 4°C. Store at +4°C short term (1-2 weeks). Upon delivery aliquot. Store at -20°C long term. Avoid freeze / thaw cycle.
	pH: 7.40
	Constituents: 0.00017% PBS, 0.88% Sodium chloride
	This product is an active protein and may elicit a biological response in vivo, handle with caution.
General Info	
Relevance	IgE is the class of antibodies produced in the lungs, skin, and mucous membranes. It may protect against parasite invasion, but it is a major factor in allergic reactions. The antigen-specific IgE interacts with mast cells and eosinophils, triggers the release of histamine, leukotrienes and other substances that lead to the itching, sneezing and congestion of allergies - and the life threatening respiratory distress of asthma and anaphylactic shock.
Cellular localization	Cell Membrane

Sandwich ELISA - Native Human IgE protein (Azide free) (ab65866)

SDS-PAGE analysis of:

Lane 1: Molecular weight markers. Lane 2: ab65866.

Lane 3: IgE purified from serum from a myeloma patient.

(ab65866)

Please note: All products are "FOR RESEARCH USE ONLY. NOT FOR USE IN DIAGNOSTIC PROCEDURES"

#### Our Abpromise to you: Quality guaranteed and expert technical support

- · Replacement or refund for products not performing as stated on the datasheet
- Valid for 12 months from date of delivery
- Response to your inquiry within 24 hours
- We provide support in Chinese, English, French, German, Japanese and Spanish
- Extensive multi-media technical resources to help you
- We investigate all quality concerns to ensure our products perform to the highest standards

If the product does not perform as described on this datasheet, we will offer a refund or replacement. For full details of the Abpromise, please visit <u>https://www.abcam.com/abpromise</u> or contact our technical team.

#### Terms and conditions

• Guarantee only valid for products bought direct from Abcam or one of our authorized distributors
