**General Info** 

1

**Function** Neuronal phosphoprotein that coats synaptic vesicles, binds to the cytoskeleton, and is believed

to function in the regulation of neurotransmitter release. The complex formed with NOS1 and

CAPON proteins is necessary for specific nitric-oxid functions at a presynaptic level.

Involvement in disease Defects in SYN1 are a cause of epilepsy X-linked with variable learning disabilities and behavior

disorders [MIM:300491]. XELBD is characterized by variable combinations of epilepsy, learning

difficulties, macrocephaly, and aggressive behavior.

Sequence similarities Belongs to the synapsin family.

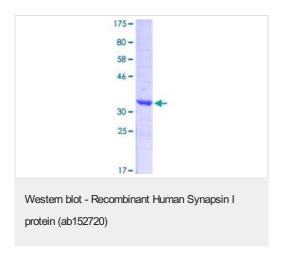

Post-translational Substrate of at least four different protein kinases. It is probable that phosphorylation plays a role modifications

in the regulation of synapsin-1 in the nerve terminal. Phosphorylated upon DNA damage, probably

by ATM or ATR.

**Cellular localization** Cell junction > synapse. Golgi apparatus.
