## Product datasheet

# Recombinant Rat Lipocalin-2 / NGAL protein ab108563

# 1 References

**Description** 

Product name Recombinant Rat Lipocalin-2 / NGAL protein

Purity > 90 % SDS-PAGE.

ab108563 is 0.2µm filtered.

Endotoxin level< 0.100 Eu/μg</th>Expression systemHEK 293 cells

Accession P30152

Protein length Full length protein

Animal free No

Nature Recombinant

SpeciesRatPredicted molecular weight25 kDaAmino acids1 to 198

Tags DDDDK tag C-Terminus

#### **Specifications**

Our  $\underline{\textbf{Abpromise guarantee}}$  covers the use of ab108563 in the following tested applications.

The application notes include recommended starting dilutions; optimal dilutions/concentrations should be determined by the end user.

Applications SDS-PAGE

Form Liquid

#### **Preparation and Storage**

**Stability and Storage** Shipped at 4°C. Upon delivery aliquot and store at -20°C. Avoid freeze / thaw cycles.

Constituent: PBS

#### **General Info**

Function Iron-trafficking protein involved in multiple processes such as apoptosis, innate immunity and

renal development. Binds iron through association with 2,5-dihydroxybenzoic acid (2,5-DHBA), a

1

siderophore that shares structural similarities with bacterial enterobactin, and delivers or removes iron from the cell, depending on the context. Iron-bound form (holo-24p3) is internalized following binding to the SLC22A17 (24p3R) receptor, leading to release of iron and subsequent increase of intracellular iron concentration. In contrast, association of the iron-free form (apo-24p3) with the SLC22A17 (24p3R) receptor is followed by association with an intracellular siderophore, iron chelation and iron transfer to the extracellular medium, thereby reducing intracellular iron concentration. Involved in apoptosis due to interleukin-3 (IL3) deprivation: iron-loaded form increases intracellular iron concentration without promoting apoptosis, while iron-free form decreases intracellular iron levels, inducing expression of the proapoptotic protein BCL2L11/BIM, resulting in apoptosis. Involved in innate immunity, possibly by sequestrating iron, leading to limit bacterial growth.

Tissue specificity

Expressed in bone marrow and in tissues that are prone to exposure to microorganism. High expression is found in bone marrow as well as in uterus, prostate, salivary gland, stomach, appendix, colon, trachea and lung. Not found in the small intestine or peripheral blood leukocytes.

Sequence similarities

Belongs to the calycin superfamily. Lipocalin family.

**Cellular localization** 

Secreted. Upon binding to the SLC22A17 (24p3R) receptor, it is internalized.

Please note: All products are "FOR RESEARCH USE ONLY. NOT FOR USE IN DIAGNOSTIC PROCEDURES"

## Our Abpromise to you: Quality guaranteed and expert technical support

- · Replacement or refund for products not performing as stated on the datasheet
- Valid for 12 months from date of delivery
- Response to your inquiry within 24 hours
- We provide support in Chinese, English, French, German, Japanese and Spanish
- Extensive multi-media technical resources to help you
- We investigate all quality concerns to ensure our products perform to the highest standards

If the product does not perform as described on this datasheet, we will offer a refund or replacement. For full details of the Abpromise, please visit <a href="https://www.abcam.com/abpromise">https://www.abcam.com/abpromise</a> or contact our technical team.

#### Terms and conditions

• Guarantee only valid for products bought direct from Abcam or one of our authorized distributors
