Rat Albumin ELISA Kit ab108789

Overview

Product name: Rat Albumin ELISA Kit
Detection method: Colorimetric

Sample type: Cell culture supernatant, Urine
Assay type: Sandwich (quantitative)
Sensitivity: = 0.4 ng/ml
Range: 0.781 ng/ml - 200 ng/ml
Recovery: 97 %
Assay time: 3h 00m
Assay duration: Multiple steps standard assay
Species reactivity: Reacts with: Rat

Product overview:
Rat Albumin in vitro ELISA (Enzyme-Linked Immunosorbent Assay) kit is designed for the quantitative measurement of Albumin in cell culture supernatants and urine.

An Albumin specific antibody has been precoated onto 96-well plates and blocked. Standards or test samples are added to the wells and subsequently an Albumin specific biotinylated detection antibody is added and then followed by washing with wash buffer. Streptavidin-Peroxidase Conjugate is added and unbound conjugates are washed away with wash buffer. TMB is then used to visualize Streptavidin-Peroxidase enzymatic reaction. TMB is catalyzed by Streptavidin-Peroxidase to produce a blue color product that changes into yellow after adding acidic stop solution. The density of yellow coloration is directly proportional to the amount of Albumin captured in plate.
**Tested applications**

**Suitable for:** Sandwich ELISA

**Platform**

Microplate

---

**Properties**

**Storage instructions**

Store at -20°C. Please refer to protocols.

**Function**

Serum albumin, the main protein of plasma, has a good binding capacity for water, Ca(2+), Na(+), K(+), fatty acids, hormones, bilirubin and drugs. Its main function is the regulation of the colloidal osmotic pressure of blood. Major zinc transporter in plasma, typically binds about 80% of all plasma zinc.

**Tissue specificity**

Plasma.

**Involvement in disease**

Defects in ALB are a cause of familial dysalbuminemic hyperthyroxinemia (FDH) [MIM:103600]. FDH is a form of euthyroid hyperthyroxinemia that is due to increased affinity of ALB for T(4). It is the most common cause of inherited euthyroid hyperthyroxinemia in Caucasian population.

**Sequence similarities**

Belongs to the ALB/AFP/VDB family.

Contains 3 albumin domains.

**Post-translational modifications**

Kenitra variant is partially O-glycosylated at Thr-620. It has two new disulfide bonds Cys-600 to Cys-602 and Cys-601 to Cys-606.

Glycated in diabetic patients.

Phosphorylation sites are present in the extracellular medium.

Acetylated on Lys-223 by acetylsalicylic acid.

**Cellular localization**

Secreted.

---

**Applications**

Our Abpromise guarantee covers the use of ab108789 in the following tested applications.

The application notes include recommended starting dilutions; optimal dilutions/concentrations should be determined by the end user.
### Application
- Sandwich ELISA

### Notes
- Use at an assay dependent dilution.

#### Images

**Rat albumin measured in tissue lysates showing quantity (microgram) per mg protein**

**Rat albumin measured in various samples showing quantity (microgram) per mL of tested sample**

**Representative Standard Curve using ab108789.**
Please note: All products are "FOR RESEARCH USE ONLY AND ARE NOT INTENDED FOR DIAGNOSTIC OR THERAPEUTIC USE".

**Our Abpromise to you: Quality guaranteed and expert technical support**

- Replacement or refund for products not performing as stated on the datasheet
- Valid for 12 months from date of delivery
- Response to your inquiry within 24 hours
- We provide support in Chinese, English, French, German, Japanese and Spanish
- Extensive multi-media technical resources to help you
- We investigate all quality concerns to ensure our products perform to the highest standards

If the product does not perform as described on this datasheet, we will offer a refund or replacement. For full details of the Abpromise, please visit [https://www.abcam.com/abpromise](https://www.abcam.com/abpromise) or contact our technical team.

**Terms and conditions**

- Guarantee only valid for products bought direct from Abcam or one of our authorized distributors
