Product datasheet

Sodium salicylate ab120746

Overview

Product name: Sodium salicylate

Description: Cell-permeable anti-inflammatory agent

Biological description: Cell-permeable anti-inflammatory agent. Inhibits cyclooxygenases preventing prostaglandin formation. Inhibits components of the MAPK cascade, NF-κB and AP-1. Induces apoptosis through p38 MAPK activation.

Purity: > 99%

Properties

Chemical name: 2-Hydroxybenzoic acid sodium salt

Molecular weight: 160.10

Chemical structure: [Chemical structure image]

Molecular formula: C7H5NaO3

CAS Number: 54-21-7

Storage instructions: Store at Room Temperature. Store under desiccating conditions. The product can be stored for up to 12 months.

Solubility overview: Soluble in water to 100 mM

Handling: Wherever possible, you should prepare and use solutions on the same day. However, if you need to make up stock solutions in advance, we recommend that you store the solution as aliquots in tightly sealed vials at -20°C. Generally, these will be useable for up to one month. Before use, and prior to opening the vial we recommend that you allow your product to equilibrate to room temperature for at least 1 hour.

Need more advice on solubility, usage and handling? Please visit our frequently asked questions (FAQ) page for more details.

Applications

Our Abpromise guarantee covers the use of ab120746 in the following tested applications.

The application notes include recommended starting dilutions; optimal dilutions/concentrations should be determined by the end user.
THP1 cells were incubated at 37°C for 40h with vehicle control (0 µM) and different concentrations of sodium salicylate (ab120746). Decreased expression of scavenging receptor SR-BI (ab52629) in THP1 cells correlates with an increase in sodium salicylate concentration, as described in literature.

Whole cell lysates were prepared with RIPA buffer (containing protease inhibitors and sodium orthovanadate), 10 µg of each were loaded on the gel and the WB was run under reducing conditions. After transfer the membrane was blocked for an hour using 5% BSA before being incubated with ab52629 at 1/2000 dilution and ab8227 at 1 µg/ml overnight at 4°C. Antibody binding was detected using an anti-rabbit antibody conjugated to HRP (ab97051) at 1/10000 dilution and visualised using ECL development solution.
