Application notes
Is unsuitable for Flow Cyt or ICC/IF.

Target

Function
Receptor for somatostatins-14 and -28. This receptor is coupled via pertussis toxin sensitive G proteins to inhibition of adenylyl cyclase. In addition it stimulates phosphotyrosine phosphatase and PLC via pertussis toxin insensitive as well as sensitive G proteins. In RIN-5F cells, this receptor inhibits calcium entry by suppressing voltage dependent calcium-channels.

Tissue specificity
Cerebrum and kidney. In lesser amounts in jejunum, colon and liver.

Sequence similarities
Belongs to the G-protein coupled receptor 1 family.

Cellular localization
Cell membrane.

Images
Agonist-induced internalization of sst₂ (Somatostatin Receptor 2) and sst₅ (Somatostatin Receptor 5) tail-swap mutants

Stably transfected HEK-293 cells were treated with 1 µM SS-14 for 0, 15 or 30 min. Cells were then fixed, stained with the anti-sst2 {UMB-1} (ab134152) or anti-sst5 antibody {UMB-4} (ab109495) and examined by confocal microscopy. Shown are representative images from one of at least three independent experiments. Scale bar, 20 µm.

Cells were fixed with 4% paraformaldehyde and 0.2% picric acid in phosphate buffer (pH 6.9) for 30 min at room temperature and washed several times. Cells were then permeabilized prior to incubation with the respective primary antibodies. Alexa® 488-conjugated secondary antibodies were used.
