<b>General notes</b>	Previously labelled as Transcription factor 25.  Reproducibility is key to advancing scientific discovery and accelerating scientists' next breakthrough.  Abcam is leading the way with our range of recombinant antibodies, knockout-validated antibodies and knockout cell lines, all of which support improved reproducibility.  We are also planning to innovate the way in which we present recommended applications and species on our product datasheets, so that only applications & species that have been tested in our own labs, our suppliers or by selected trusted collaborators are covered by our Abpromise™ guarantee.  In preparation for this, we have started to update the applications & species that this product is Abpromise guaranteed for.  We are also updating the applications & species that this product has been “predicted to work with,” however this information is not covered by our Abpromise guarantee.  Applications & species from publications and Abreviews that have not been tested in our own labs or in those of our suppliers are not covered by the Abpromise guarantee.  Please check that this product meets your needs before purchasing. ## Target

---

<b>Function</b>	May play a role in cell death control. Acts as a transcriptional repressor. Has been shown to repress transcription of SRF in vitro and so may play a role in heart development.
<b>Tissue specificity</b>	In the embryo, widely expressed with highest levels in brain. In the adult, highest expression is found in the heart.
<b>Sequence similarities</b>	Belongs to the TCF25 family.
<b>Domain</b>	The C-terminal region mediates transcriptional repression.
<b>Cellular localization</b>	Nucleus. Some staining in the cytosol.
