**Product datasheet**

**Anti-TSG101 antibody ab30871**

⭐⭐⭐⭐⭐ 1 Abreviews  36 References  4 Images

### Overview

**Product name**  
Anti-TSG101 antibody

**Description**  
Rabbit polyclonal to TSG101

**Host species**  
Rabbit

**Tested applications**  
Suitable for: WB, ICC/IF, IHC-P

**Species reactivity**  
Reacts with: Mouse, Rat, Human

**Immunogen**  
Synthetic peptide corresponding to Human TSG101 aa 350 to the C-terminus (C terminal) conjugated to keyhole limpet haemocyanin.  
Database link: Q99816  
(Peptide available as ab30870)

**Positive control**  
This antibody gave a positive signal in the following whole cell lysates: HeLa (Human epithelial carcinoma cell line) A431 (Human epithelial carcinoma cell line) Jurkat (Human T cell lymphoblast-like cell line) HEK293 (Human embryonic kidney cell line) NIH 3T3 (Mouse embryonic fibroblast cell line) PC12 (Rat adrenal pheochromocytoma cell line) This antibody also gave a positive signal in human placenta tissue sections.

### Properties

**Form**  
Liquid

**Storage instructions**  
Shipped at 4°C. Store at +4°C short term (1-2 weeks). Upon delivery aliquot. Store at -20°C or -80°C. Avoid freeze / thaw cycle.

**Storage buffer**  
Preservative: 0.02% Sodium Azide  
Constituents: 1% BSA, PBS, pH 7.4

**Purity**  
Immunogen affinity purified

**Clonality**  
Polyclonal

**Isotype**  
IgG

### Applications

Our Abpromise guarantee covers the use of ab30871 in the following tested applications. The application notes include recommended starting dilutions; optimal dilutions/concentrations should be determined by the end user.
**Function**
Component of the ESCRT-I complex, a regulator of vesicular trafficking process. Binds to ubiquitinated cargo proteins and is required for the sorting of endocytic ubiquitinated cargos into multivesicular bodies (MVBs). Mediates the association between the ESCRT-0 and ESCRT-I complex. Required for completion of cytokinesis; the function requires CEP55. May be involved in cell growth and differentiation. Acts as a negative growth regulator. Involved in the budding of many viruses through an interaction with viral proteins that contain a late-budding motif P-[ST]-A-P. This interaction is essential for viral particle budding of numerous retroviruses.

**Tissue specificity**
Heart, brain, placenta, lung, liver, skeletal, kidney and pancreas.

**Sequence similarities**
Belongs to the ubiquitin-conjugating enzyme family. UEV subfamily. Contains 1 SB (steadiness box) domain. Contains 1 UEV (ubiquitin E2 variant) domain.

**Domain**
The UEV domain is required for the interaction of the complex with ubiquitin. It also mediates the interaction with PTAP/PSAP motifs of HIV-1 P6 protein and human spumaretrovirus Gag protein. The coiled coiled domain may interact with stathmin. The UEV domain binds ubiquitin and P-[ST]-A-P peptide motif independently.

**Post-translational modifications**
Monoubiquitinated at multiple sites by LRSAM1 and by MGRN1. Ubiquitination inactivates it, possibly by regulating its shuttling between an active membrane-bound protein and an inactive soluble form. Ubiquitination by MGRN1 requires the presence of UBE2D1.

**Cellular localization**

**Application**

**Western blot** - Anti-TSG101 antibody (ab30871)

**All lanes**: Anti-TSG101 antibody (ab30871) at 1 µg/ml

- **Lane 1**: HeLa (Human epithelial carcinoma cell line) Whole Cell Lysate
- **Lane 2**: A431 (Human epithelial carcinoma cell line) Whole Cell Lysate
- **Lane 3**: Jurkat (Human T cell lymphoblast-like cell line) Whole Cell Lysate
- **Lane 4**: HEK293 Human embryonic kidney cell line Whole Cell Lysate
- **Lane 5**: HepG2 (Human hepatocellular liver carcinoma cell line) Whole Cell Lysate
- **Lane 6**: MCF7 (Human breast adenocarcinoma cell line) Whole Cell Lysate
- **Lane 7**: SHSY-5Y (Human neuroblastoma cell line) Whole Cell Lysate
- **Lane 8**: U2OS (Human osteosarcoma cell line) Whole Cell Lysate

Lysates/proteins at 10 µg per lane.

**Secondary**

- **All lanes**: IRDye 680 Conjugated Goat Anti-Rabbit IgG (H+L) at 1/10000 dilution

Performed under reducing conditions.

**Predicted band size**: 44 kDa

**Observed band size**: 49 kDa

*why is the actual band size different from the predicted?*
Immunocytochemistry/ Immunofluorescence - Anti-TSG101 antibody (ab30871)

ICC/IF image of ab30871 stained human HEK 293 cells. The cells were 4% PFA fixed (10 min), permabilised in 0.1% PBS-Tween (20 min) and incubated with the antibody (ab30871, 5µg/ml) for 1h at room temperature. 1%BSA / 10% normal goat serum / 0.3M glycine was used to block non-specific protein-protein interactions. The secondary antibody (green) was Alexa Fluor® 488 goat anti-rabbit IgG (H+L) used at a 1/1000 dilution for 1h. Alexa Fluor® 594 WGA was used to label plasma membranes (red). DAPI was used to stain the cell nuclei (blue). This antibody also gave a positive IF result in HeLa, HepG2 and MCF7 cells.

Immunohistochemistry/ Immunofluorescence - Anti-TSG101 antibody (ab30871)

IHC image of ab30871 staining in human placenta formalin fixed paraffin embedded tissue section, performed on a Leica Bond™ system using the standard protocol F. The section was pre-treated using heat mediated antigen retrieval with sodium citrate buffer (pH6, epitope retrieval solution 1) for 20 mins. The section was then incubated with ab30871, 5µg/ml, for 15 mins at room temperature and detected using an HRP conjugated compact polymer system. DAB was used as the chromogen. The section was then counterstained with haematoxylin and mounted with DPX.

For other IHC staining systems (automated and non-automated) customers should optimize variable parameters such as antigen retrieval conditions, primary antibody concentration and antibody incubation times.
All lanes: Anti-TSG101 antibody (ab30871) at 1 µg/ml

Lane 1: NIH 3T3 (Mouse embryonic fibroblast cell line) Whole Cell Lysate
Lane 2: PC12 (Rat adrenal pheochromocytoma cell line) Whole Cell Lysate

Lysates/proteins at 10 µg per lane.

Secondary
All lanes: Goat Anti-Rabbit IgG H&L (HRP) (ab97051) at 1/10000 dilution

Developed using the ECL technique.

Performed under reducing conditions.

Predicted band size: 44 kDa
Observed band size: 48,49 kDa why is the actual band size different from the predicted?
Additional bands at: 29 kDa. We are unsure as to the identity of these extra bands.

Exposure time: 90 seconds

This blot was produced using a 4-12% Bis-tris gel under the MOPS buffer system. The gel was run at 200V for 50 minutes before being transferred onto a Nitrocellulose membrane at 30V for 70 minutes. The membrane was then blocked for an hour using 5% Bovine Serum Albumin before being incubated with ab30871 overnight at 4°C. Antibody binding was detected using an anti-rabbit antibody conjugated to HRP, and visualised using ECL development solution.

The doublet seen in Western blot has been described in

Our Abpromise to you: Quality guaranteed and expert technical support

- Replacement or refund for products not performing as stated on the datasheet
- Valid for 12 months from date of delivery
- Response to your inquiry within 24 hours
- We provide support in Chinese, English, French, German, Japanese and Spanish
- Extensive multi-media technical resources to help you
- We investigate all quality concerns to ensure our products perform to the highest standards

If the product does not perform as described on this datasheet, we will offer a refund or replacement. For full details of the Abpromise, please visit https://www.abcam.com/abpromise or contact our technical team.

Terms and conditions

- Guarantee only valid for products bought direct from Abcam or one of our authorized distributors
